Model Building in Mathematical Programming H. Paul Williams, 2013-01-18 The 5th edition of Model Building in Mathematical Programming discusses the general principles of model building in mathematical programming and demonstrates how they can be applied by using several simplified but practical problems from widely different contexts Suggested formulations and solutions are given together with some computational experience to give the reader a feel for the computational difficulty of solving that particular type of model Furthermore this book illustrates the scope and limitations of mathematical programming and shows how it can be applied to real situations By emphasizing the importance of the building and interpreting of models rather than the solution process the author attempts to fill a gap left by the many works which concentrate on the algorithmic side of the subject In this article H P Williams explains his original motivation and objectives in writing the book how it has been modified and updated over the years what is new in this edition and why it has maintained its relevance and popularity over the years a href http www statisticsviews com details feature 4566481 Model Building in Mathematical Programming published in fifth edition html http www statisticsviews com details feature 4566481 Model Building in Mathematical Programming published in fifth edition html a
