Data Envelopment Analysis Theory, Methodology and Applications

CHARNES A, COOPER W, LEWIN AY and SEIFORD LM (eds).
Kluwer Academic Publishers, London, 1995, xii + 513 pp.
£105.00 ISBN 0 7923 9479 8

The pursuit of organizational efficiency has become something of an obsession for the modern manager. However, managers interested in identifying efficient practice have few tools available, other than the juvenilia hawked by accountants. A notable exception is the technique known as data envelopment analysis (DEA), which was introduced to the world in its modern form in 1978. The deceptively simple DEA model has since become a remarkably fertile field for both research and practice.

DEA offers an insight into the relative efficiency of comparable 'decision-making units' such as—say—schools. It offers a conservative estimate of comparative efficiency in situations in which multiple inputs and multiple outputs are found. The technique exploits limited data to its full extent, and can be used to examine technical efficiency, allocative efficiency and scale efficiency. It has proved to be immensely useful in a wide range of settings. On the downside, the technique is sensitive to data accuracy, and some DEA practitioners are guilty of stretching their analysis beyond the capacity of the data available to them.

This long awaited book seeks to summarize and codify the state of current scientific knowledge relating to DEA. It comprises three parts: an introduction to the concepts, models and computational aspects of DEA; a set of case studies; and an epilogue and bibliography. Part I first offers an intuitive insight into DEA and then develops a sequence of basic theoretical models, followed by a series of refinements and extensions. The intention is to present a unified treatment of the topic. This part of the book will enable

researchers to gain an *entrée* into the subject, and to use a common terminology in describing their work. Indeed in a noteworthy development the publishers will give permission to authors to incorporate material from these early chapters into their books. The case studies in Part II cover a wide range of topics, and are written by many of the most prominent researchers in DEA. They will undoubtedly inspire both researchers and practitioners. In Part III almost all readers will offer grateful thanks for Larry Seiford's remarkably comprehensive bibliography.

The editors hope that the text will serve as an introduction to new users and a reference for the more experienced. How does it measure up to its ambitions? It must be said that teaching DEA can give rise to unexpected difficulties. While the underlying concepts are apparently simple, the intricacies of the technique can often prove elusive, particularly to those trained in traditional statistical techniques. The editors have chosen to present the (traditional) DEA model as the culmination of more general concepts, which in my judgement is very successful. Although 'old hands' may find the ordering of the material superficially perverse, I believe the book succeeds in presenting a difficult technique in a logical and accessible fashion. No serious DEA researcher should be without the text, and indeed the project should serve as a model for authors with similar ambitions in other disciplines.

The book arises from a conference on DEA held in 1989, implying a massive delay in bringing the material to publication. While not entirely satisfactory, the hiatus has resulted in some substantial benefits. First, it has given the editors the opportunity to review all the material rigorously, in contrast to many conference proceedings. Second, the book is free of the rather exotic developments that have infiltrated some of the DEA literature in more recent years. Perhaps the one question mark concerns the price the publishers have chosen to attach to the book. Even in paperback, this is not a book for the impulse buyer.
