Mathematical Systems Theory and Economics I/II H.W. Kuhn,G.P. Szegő,1969 The International Summer School on Mathematical Systems Theory and Economics was held at the Villa Monastero in Varenna Italy from June 1 through June 12 1967 The objective of this Summer School was to review the state of the art and the prospects for the application of the mathematical theory of systems to the study and the solution of economic problems Particular emphasis was given to the use of the mathematical theory of control for the solution of problems in economics It was felt that the publication of a volume collecting most of the lectures given at the school would show the current status of the application of these methods The papers are organized into four sections arranged into two volumes basic theories and optimal control of economic systems which appear in the first volume and special mathematical problems and special applications which are contained in the second volume Within each section the papers follow in alphabetical order by author The seven papers on basic theories are a rather complete representative sample of the fundamentals of general systems theory of the theory of dynamical systems and the theory of control The five papers on the application of optimal control to economic systems present a broad spectrum of applications

Spectral Theory of Value and Actual Economies Theodore Mariolis,Nikolaos Rodousakis,George Soklis,2021-05-29 This book develops a unified treatment of the income distribution capital value problems with respect to actual economies and then gradually turns to the issues of effective demand and capitalist accumulation fluctuations from both political economy and economic policy perspectives That treatment on the one hand places produced means of production positive profits and capital accumulation at the centre of the analysis and on the other hand is analytically based on the modern control theory Hence the authors investigation is concerned with input output representations of actual single

and joint production heterogeneous labour and open economies zeroes in on the characteristic value distributions of the system matrices and finally derives meaningful theoretical results consistent with the empirical evidence and vice versa The main topics addressed are the uncontrollable unobservable aspects of the real world economies the powerful low order spectral approximations and reconstructions of the inter industry structure of production value distributive variables relationships the critical constructive appraisal of both mainstream and radical theories of value the matrix demand multipliers and demand switching policies in heterogeneous capital worlds and the circular inter actions amongst income distribution effective demand accumulation and technical conditions of production Written on the occasion of the 60th anniversary of the publication of both Piero Sraffa s Production of Commodities by Means of Commodities and Rudolf E Kalman s paper On the general theory of control systems this book provides a consistent and comprehensive framework for theoretical empirical and economic policy research

A Disequilibrium Model of Real and Financial Accumulation in an Open Economy Giancarlo Gandolfo, Pietro C. Padoan, 2012-12-06 This is the fourth version of a model that five years ago we set out to build and estimate along the lines of the continuous time approach clarified In chapter 1 Previous versions appeared in journal articles and conference proceedings where the space is notoriously limited Therefore we welcome the possibility of publishing a book length treatment of this fourth version so that we can describe its theoretical and empirical aspects in some detail Although we have worked closely together and accept joint responsibility for the whole book chs 1 and 2 and appendix I have been written by G Gandolfo whilst chs 3 and 4 and appendix II have been written by P c Padoan Different parts of this version of the model have been discussed In various lectures at the European University Institute Florence in 1984 In a seminar organized by the Bank of Italy Sadiba Perugia Italy February 16 18 1984 in the second Viennese Workshop on Economic Applications of Control Theory Vienna May 16 18 1984 and in the sixth annual Conference of the Society for Economic Dynamics and Control Nice France June 13 15 1984 In all of these we received helpful comments similarly helpful were the comments of Clifford R Wymer who however is absolved of any responsibility

A Systemic Perspective on Cognition and Mathematics Jeffrey Yi-Lin Forrest, 2013-02-28 This book is devoted to the study of human thought its systemic structure and the historical development of mathematics both as a product of thought and as a fascinating case analysis After demonstrating that systems research constitutes the second dimension of modern science the monograph discusses the yoyo model a recent ground breaking development of systems research which has brought forward revolutionary applications of systems research in various areas of the traditional disciplines the first dimension of science After the systemic structure of thought is factually revealed mathematics as a product of thought is analyzed by using the age old concepts of actual and potential infinities In an attempt to rebuild the system of mathematics this volume first provides a new look at some of the most important paradoxes which have played a crucial role in the development of mathematics in proving what these

paradoxes really entail Attention is then turned to constructing the logical foundation of two different systems of mathematics one assuming that actual infinity is different than potential infinity and the other that these infinities are the same This volume will be of interest to academic researchers students and professionals in the areas of systems science mathematics philosophy of mathematics and philosophy of science

Production Economics: A Dual Approach to Theory and Applications Melvyn Fuss, Daniel McFadden, 2014-06-28 Contributions to Economic Analysis Production Economics A Dual Approach to Theory and Applications Volume 2 focuses on the theory of production from the standpoint of the dual the relationships between economic observables which are dual to physical technology The selection first ponders on duality intermediate inputs and value added Hicks aggregation theorem and the existence of a real value added function and homotheticity and real value added in Canadian manufacturing Discussions focus on real value added and the production structure estimation of the production structure double deflation and real value added measurement of total productivity and duality between direct and conditional indirect utility functions The book then examines the estimation techniques for the elasticity of substitution and other production parameters and measurement of the elasticity of factor substitution and bias of technical change The publication takes a look at the identification of technical change in the electricity generating industry factor substitution in electricity generation and the effectiveness of rate of return regulation Topics include statistical tests of regulatory effectiveness profit function for a regulated firm tests of the structure of technology identification problems in the measurement of technical change and measurement of disembodied technical change The selection is a valuable source of information for economists and researchers interested in production economics

Fisheries Economics, Volume I Lee G. Anderson, 2019-10-28 This title was first published in 2002 This important collection of international research on fisheries economics offers a comprehensive source of contemporary research on key topics in the field as well as presenting the history of how the economic theory of fisheries exploitation has developed Bringing into focus a wide range of inquiry this volume concentrates most particularly on the traditional economic problem of optimal resource allocation Individual papers examine fundamental issues including the lack of efficiency of open access and the specification of exactly what dynamic efficiency entails Fisheries Economics is an invaluable research reference collection for the libraries of academic and other professional economists as well as an indispensable resource for those studying across the fields of natural resources fisheries economics and particularly fisheries management

Control and System Theory of Discrete-Time Stochastic Systems Jan H. van Schuppen, 2021-08-02 This book helps students researchers and practicing engineers to understand the theoretical framework of control and system theory for discrete time stochastic systems so that they can then apply its principles to their own stochastic control systems and to the solution of control filtering and realization problems for such systems Applications of the theory in the book include the control of ships shock absorbers traffic and communications networks and power systems with fluctuating power flows The focus of the book is a stochastic control system defined for a

spectrum of probability distributions including Bernoulli finite Poisson beta gamma and Gaussian distributions The concepts of observability and controllability of a stochastic control system are defined and characterized Each output process considered is with respect to conditions represented by a stochastic system called a stochastic realization The existence of a control law is related to stochastic controllability while the existence of a filter system is related to stochastic observability Stochastic control with partial observations is based on the existence of a stochastic realization of the filtration of the observed process

The Development of Economics, 1750-1900 Oswald Fred Boucke,1921 **Matekon** ,1988 The Journal of Political Economy ,1927 Deals with research and scholarship in economic theory Presents analytical interpretive and empirical studies in the areas of monetary theory fiscal policy labor economics planning and development micro and macroeconomic theory international trade and finance and industrial organization Also covers interdisciplinary fields such as history of economic thought and social economics

The Development of Economics Arthur Robert Burns,1921 This is a reproduction of the original artefact Generally these books are created from careful scans of the original This allows us to preserve the book accurately and present it in the way the author intended Since the original versions are generally quite old there may occasionally be certain imperfections within these reproductions We re happy to make these classics available again for future generations to enjoy

Trends and Progress in System Identification Pieter Eykhoff,2014-05-20 Trends and Progress in System Identification is a three part book that focuses on model considerations identification methods and experimental conditions involved in system identification Organized into 10 chapters this book begins with a discussion of model method in system identification citing four examples differing on the nature of the models involved the nature of the fields and their goals Subsequent chapters describe the most important aspects of model theory the classical methods and time series estimation application of least squares and related techniques for the estimation of dynamic system parameters the maximum likelihood and error prediction methods and the modern development of statistical methods Non parametric approaches identification of nonlinear systems by piecewise approximation and the minimax identification are then explained Other chapters explore the Bayesian approach to system identification choice of input signals and choice and effect of different feedback configurations in system identification This book will be useful for control engineers system scientists biologists and members of other disciplines dealing with dynamical relations
