Panel Data And Structural Labour Market Models:

Panel Data and Structural Labour Market Models H. Bunzel, Bent Christensen, P. Jensen, Nicholas M. Kiefer, D.T. Mortensen, 2000-02-02 This book contains papers focusing on theoretical and empirical modelling of the labour market covering both wage equilibrium models and models for labour market transition Contributions range from the theoretical or econometric through to empirical structural methods and exploratory data analysis based on employer and employee level data *Handbook of Econometrics* Zvi Griliches, Michael D. Intriligator, Robert Engle, Dan McFadden, 1983 The Handbook is a definitive reference source and teaching aid for econometricians It examines models estimation theory data analysis and field applications in econometrics **Handbook of Econometrics** James J. Heckman, Edward Leamer, 2007-12-13 As conceived by the founders of the Econometric Society econometrics is a field that uses economic theory and statistical methods to address empirical problems in economics It is a tool for empirical discovery and policy analysis The chapters in this volume embody this vision and either implement it directly or provide the tools for doing so This vision is not shared by those who view econometrics as a branch of statistics rather than as a distinct field of knowledge that designs methods of inference from data based on models of human choice behavior and social interactions All of the essays in this volume and its companion volume 6B offer guidance to the practitioner on how to apply the methods they discuss to interpret economic data The authors of the chapters are all leading scholars in the fields they survey and extend Part of the renowned Handbooks in Economics Series Updates and expands the existing Handbook of Econometrics volumes An invaluable reference written by some of the world's leading econometricians **Monopsonistic Labour Markets and the Gender Pay Gap** Boris Hirsch, 2010-04-05 This book investigates models of spatial and dynamic monopsony and their application to the persistent empirical regularity of the gender pay gap Labour Markets and Economic Development S. M. Ravi Kanbur, Jan Svejnar, 2009 This book looks at the links between the formal and informal labor market in developing and transition economies working towards an accurate understanding of labour markets and analyzing alternative policy proposals **Panel Data Econometrics** Pietro Balestra, 2000 The main focus of this book is on various theoretical and practical issues in the field of panel data econometrics This is an important and active field of research with significant relevance for empirical studies in a variety of subjects including economics finance social sciences health etc This book presents contributions by several leading experts who provide their views on a wide range of topics both theoretical and applied that can serve as a basis for future research on the methodology and applications of panel data modelling Areas of application of panel data modelling have only been increasing over the past years and there is no doubt that the range is going to expand further The applied papers of this book have been regrouped as one major part and further subdivided into different fields thus showing their variety and opening up the horizon for researchers in these and other fields The reader will notice that they all have a substantial methodological content which is indispensable for their analysis of the economic social or other

phenomena under consideration This first part includes such diversified areas of study as macroeconomics social economics insurance finance and energy economics As a second part there are papers that deal more with theoretical issues such as specification problems unit root tests and aggregation of individual series heteroscedasticity tests for panel data models and non parametric techniques The final part contains papers that are directly related to and elaborate on Balestra s work

Handbook of Econometrics J.J. Heckman,Edward Leamer,2001-11-22 The Handbook is a definitive reference source and teaching aid for econometricians It examines models estimation theory data analysis and field applications in econometrics Comprehensive surveys written by experts discuss recent developments at a level suitable for professional use by economists econometricians statisticians and in advanced graduate econometrics courses For more information on the Handbooks in Economics series please see our home page on <http://www.elsevier.nl> locate *Job Matching, Wage*

Dispersion, and Unemployment Dale T. Mortensen,Christopher A. Pissarides,2011-04-28 A selection of key papers from the winners of the Nobel Memorial Prize 2010 It features their most important work on unemployment labour market dynamics and the equilibrium search model

Labor Markets and Economic Development Ravi Kanbur,Jan Svejnar,2009-05-07 As developing and transition economies enter the next phase of reforms labor market issues increasingly come to the fore With the increased competition from globalization the discussion is shifting to the need for greater labor market flexibility and the creation of good jobs Moreover the greater actual and perceived insecurity in labor markets has generated a new agenda on how to structure safety nets and labor market regulation The older questions of the links between the formal and informal labor market reappear with new dimensions and significance More generally it is clear that an accurate understanding of how labor market structures function is essential if we are to analyze alternative policy proposals in the wake of these concerns Oddly enough in spite of this great importance there are no recent monographs that bring together rigorous studies produced by academic researchers on these various issues This book fills that gap Under the steely editorship of Ravi Kanbur and Jan Svejnar the contributors flourish in their attempts to enliven these debates

Panel Data and Labor Market Studies Joop Hartog,Geert Ridder,Jules Theeuwes,1990 The contributions in this volume cover research being carried out at the frontline of econometric analysis and labor market applications of panel data Although the volume is not organized into particular sections the reader may loosely distinguish five groups of related topics Section I deals with measurement sampling attrition and estimation problems section II deals with duration models lay offs and vacancies are covered in section III section IV is on lifecycle models and the final section is concerned with equilibrium wage distributions and unemployment insurance
