The Paradox of Self-consciousness José Luis Bermúdez,2000 In this book Jos Luis Berm dez addresses two fundamental problems in the philosophy and psychology of self consciousness 1 Can we provide a noncircular account of fully fledged self conscious thought and language in terms of more fundamental capacities 2 Can we explain how fully fledged self conscious thought and language can arise in the normal course of human development Berm dez argues that a paradox the paradox of self consciousness arises from the apparent strict interdependence between self conscious thought and linguistic self reference The paradox renders circular all theories that define self consciousness in terms of linguistic mastery of the first person pronoun It seems to follow from the paradox of self consciousness that no such account or explanation can be given Drawing on recent work in empirical psychology and philosophy the author argues that any explanation of fully fledged self consciousness that answers these two questions requires attention to primitive forms of self consciousness that are prelinguistic and preconceptual Such primitive forms of self consciousness are to be found in somatic proprioception the structure of exteroceptive perception and prelinguistic forms of social interaction The author uses these primitive forms of self consciousness to dissolve the paradox of self consciousness and to show how the two questions can be given an affirmative answer

The Fabric of Consciousness Sergio Santos,Matteo Chiesa,Maritsa Kissamitaki,2018-09-20 This short book is an invitation to thinking around the meaning of the terms consciousness reality

logics truth and human It also centers on the mind not in the sense that we want to scientifically describe the brain its parts and its functions We describe the mind in that with the mind we can attend to what the world ourselves and others have to say Is the mind a tool for logics coherence and the grasping of emotions This book comes at a time when predictive AI and definitions of intelligence are expected to overwhelm humans with logics and evidence that anchor to a reality constructed with strong and reasonable arguments In the meantime and in the middle of a turmoil of words dissolving truths and ambiguity new technologies such as AI and the laws that come with them are emerging
