Vascular Innervation and Receptor Mechanisms Lars Edvinsson,Rolf Uddman,1993 Vascular Innervation and Receptor Mechanisms

Flow-dependent Regulation of Vascular Function John A. Bevan,Gabor Kaley,Gabor M. Rubanyi,1995 This book brings together current research on the way in which blood flow can regulate vascular function with

particular emphasis on vascular tone Evidence that this occurs is derived from the study of isolated cellular and tissue systems in vitro vascular segments and vascular beds from both animals and humans It seems likely that flow sensitive mechanisms are found in most arteries and veins Considerable attention is devoted in this book to the role of the endothelium It also examines the cellular and sub cellular mechanisms involved the effective stimulus the signal transduction systems the role of flow dependent mechanisms in various physiological regulating processes and the role of flow in the long term design of the circulation system Included are chapters concerned with the involvement of flow related mechanisms in disease for example arteriosclerosis vasospasm and their alteration in heart failure and hypertension It may be that sensitivity to flow represents an important underlying characteristic of the vascular system essential to its role in bringing the desired volume of blood to tissues in amounts appropriate to their need Cardiac Nursing Susan L. H. Birkenhäger,1997 Hardbound A recent wave of interest in practical hypertension research relates to the evaluation of organ damage in connection with the hypertensive process A large number of prognostic therapeutic trials in hypertensive populations has convincingly shown that antihypertensive treatment per se substantially improves the cardiovascular prospects of such patients This particularly applies to cerebrovascular accidents which are the most dramatic events from any point of view It should be recognized that the identification of all cardiovascular sequelae thus far focused on conventional clinical pathological criteria and hence lacked quantitative evaluation The currently available techniques of identifying early organ lesions may well exonerate hypertensive patients from being exposed to avoidable and irreversible cardiovascular risk because they pinpoint early quantifiable hypertensive retinal cerebral cardiac and renal lesions Given the current
