Improvement of the Ozonation Process Through the Use of Static Mixers C. Mysore, J. Lepercq, Daniel W. Smith, S. Craik, G. Finch, R. Lake, P. Agutter, C. de Traversay, D. Wolbert, Gary Amy, 2004-01-01 Among the known disinfectants ozone has been demonstrated to be very effective in inactivating protozoans Current and proposed regulations impose additional treatment requirements for *Cryptosporidium parvum* These regulatory trends tend to place more stringent performance demands on disinfection systems and have therefore increased the need for improvements in the design The static mixer offers one alternative method for improving the efficiency of the dissolution of ozone and optimizing its use in the disinfection process The overall objective of this research was to quantify the potential benefits of ozone application through the use of static mixers in terms of increased transfer efficiency disinfection capacity and enhanced chemical reactions at laboratory pilot and full scale systems Specific goals were to identify and quantify the effect of several water quality parameters and environmental engineered factors on the disinfection capacity of the ozone static mixer system and assess bromate formation under optimum conditions for microbial inactivation Originally published by AwwaRF for its subscribers in 2003 This publication can also be purchased and downloaded via Pay Per View on Water Intelligence Online click on the Pay Per View icon below
