### Abstract

In this paper, we present full characterizations of a multifunction  $F : \Omega \rightarrow ck(X)$  admitting a measurable by seminorm selector, where  $(\Omega, \Sigma, \mu)$  is a complete finite measure space and  $ck(X)$  is the family of all convex compact nonempty subsets of a Fréchet space  $X$ .

## **Measurable Selectors Of Pca Multifunctions With Applications:**

*Measurable Selectors of  $\{\underline{PCA}\}$  Multifunctions with Applications* Marian Srebrny, 1984 In this paper measurable selection theory is studied from the modern descriptive set theory point of view

*Measurable Selectors of PCA Multifunctions with Applications* Michael Eugene Taylor, André Joyal, Jerome William Hoffman, Josefina Casasayas, Marian Srebrny, Roger D. Nussbaum, 1984

*Topological Fixed Point Theory of Multivalued Mappings* Lech Górniewicz, 2006-06-03 This book is an attempt to give a systematic presentation of results and methods which concern the fixed point theory of multivalued mappings and some of its applications In selecting the material we have restricted ourselves to studying topological methods in the fixed point theory of multivalued mappings and applications mainly to differential inclusions Thus in Chapter III the approximation on the graph method in fixed point theory of multivalued mappings is presented Chapter IV is devoted to the homological methods and contains more general results e.g. the Lefschetz Fixed Point Theorem the fixed point index and the topological degree theory In Chapter V applications to some special problems in fixed point theory are formulated Then in the last chapter direct applications to differential inclusions are presented Note that Chapters I and II have an auxiliary character and only results connected with the Banach Contraction Principle see Chapter II are strictly related to topological methods in the fixed point theory In the last section of our book see Section 75 we give a bibliographical guide and also signal some further results which are not contained in our monograph The author thanks several colleagues and my wife Maria who read and commented on the manuscript These include J Andres A Buraczewski G Gabor A Górnica M Górniewicz S Park and A Wiczorek The author wishes to express his gratitude to P Konstanty for preparing the electronic version of this monograph

**Solution Sets for Differential Equations and Inclusions** Smaïl Djebali, Lech Górniewicz, Abdelghani Ouahab, 2012-12-06 This monograph gives a systematic presentation of classical and recent results obtained in the last couple of years It comprehensively describes the methods concerning the topological structure of fixed point sets and solution sets for differential equations and inclusions Many of the basic techniques and results recently developed about this theory are presented as well as the literature that is disseminated and scattered in several papers of pioneering researchers who developed the functional analytic framework of this field over the past few decades Several examples of applications relating to initial and boundary value problems are discussed in detail The book is intended to advanced graduate researchers and instructors active in research areas with interests in topological properties of fixed point mappings and applications it also aims to provide students with the necessary understanding of the subject with no deep background material needed This monograph fills the vacuum in the literature regarding the topological structure of fixed point sets and its applications

**Topological Fixed Point Principles for Boundary Value Problems** J. Andres, Lech Górniewicz, 2013-04-17 The book is devoted to the topological fixed point theory both for single valued and multivalued mappings in locally convex spaces including its application to boundary value problems for ordinary differential equations

inclusions and to multivalued dynamical systems It is the first monograph dealing with the topological fixed point theory in non metric spaces Although the theoretical material was tendentiously selected with respect to applications the text is self contained Therefore three appendices concerning almost periodic and derivo periodic single valued multivalued functions and multivalued fractals are supplied to the main three chapters
