

BANDKERAMIK SOCIAL STRUCTURE: A PILOT STUDY

In the first section of this chapter the fundamental distinction between "participants'" models and "observer's" models is discussed, and the latter are subdivided into "statistical" and "mechanical" models. To arrive at an image of Bandkeramik social life, it is then stated, the path should go from theory through mechanical models to the statistical description. Irrevocably, the participants' views on the subject have been lost. On the assumption that a graveyard presents a clearer record of the social organization behind it than settlement debris does, the four other sections of this chapter are devoted to an analysis of the grave goods in the Elsloo Cemetery. A short general description in the second section precedes three models of LBK social structure: a study of the hierarchy of statuses (Section 3), of the relations between these (Section 4); and Section 5 a more dynamic model is presented, which attempts to transcend the other two in linking sets of relations to sets of social positions. In the next chapter, these models will be tested and amended: the statistical descriptions of Bandkeramik social structure.

1. *Introduction: prescriptions and descriptions*

Reality normally seems to be a complex affair with several different levels: a "pure" level, where laws or rules are universally valid, where "pure" and "impure" are forever separate; and an "impure" or practical level, where even the "pure" Brahmin is necessarily soiled by the impure facts of life (Dumont 1970: 80-87). The first level is perhaps nothing but a construct, "good to think in"; its consistent construction renders it an ideal playground for the intellect. The second level, closer to the facts, is that of the soiled rules: in the Hindu case, the castes are fully dependent one upon the other, if only to neutralize impurity (Dumont 1964: 16) and this side of reality may differ considerably from the ideals of the first level.

The description of social reality (and not just that of traditional Hindu society alone) may be quite different from the organizing principles which govern it, although the latter do have as much reality value as, say, a grammar (Hawkes

1977: 39). The description is called a "statistical model" of the social reality, and the grammatical rules behind it form the "mechanical model" of that world (Lévi-Strauss 1967: 275; Guillaumin 1968).

Together, statistical and mechanical models are called (external) observer's models, because they are not usually recognized, known by the agents (Lévi-Strauss 1967: 275) – although this is not always so: the manipulation with supply and demand effects on prices immediately comes to mind. Several other levels exist too: the members of the group under observation will also have ideas about principles according to which they behave – the "participants' view" (De Josselin de Jong 1956: 149, 157; also cf. De Josselin de Jong 1971). The "observer's"/"participants'" dichotomy is parallel to the "etic"/"emic" distinction discussed in Chapter II.

For instance, during my anthropological fieldwork training in southern Spain (Van de Velde 1971), the peasants told me that they were all
