Nature Of Science Problems And Perspectives:

Beyond Kuhn Edwin H.-C. Hung, 2017-03-02 Thomas Kuhn's celebrated work *The Structure of Scientific Revolutions* revolutionized thinking in the philosophy of science and to a large extent his paradigm shift view has replaced logical positivism and the philosophy of Karl Popper. This book goes beyond Kuhn by explicating the non-deductive notion of paradigm shift in terms of the new concept of representational space. In doing so, Edwin H. C. Hung is able to produce the first ever unitary theory that solves the five central problems in the philosophy of science: scientific explanation, the structure of scientific theories, incommensurability, scientific change, and physical necessity. The book identifies the main task of science as representing reality. This involves the construction of a representational space and the subsequent modeling of reality with configurations of objects in that space. Newton's mechanics, Einstein's relativity, and quantum mechanics then all serve as representational spaces. *Beyond Kuhn* is a significant progression in scientific methodology. Other than serving as a sequel to Kuhn's *Scientific Revolutions*, it will be of great use in the fields of artificial intelligence, cognitive psychology, and education.

Human-Nature Interactions: Perspectives on Conceptual and Methodological Issues Tadhg Eoghan MacIntyre, Juergen Beckmann, Giovanna Caligiuri, Aoife A. Donnelly, Marc Jones, Christopher R. Madan, Mike Rogerson, Noel E. Brick, Mark Nieuwenhuijsen, Christopher James Gidlow, 2021-01-06 *Views of Nature, and of the Elements, Forces, and Phenomena of Nature, and of Mind* Ezra Champion Seaman, 1873 *The Nature of Scientific Innovation, Volume I* David Dent, 2024-12-01 Innovation is a major driver of social, economic, and environmental change and is researched extensively by academics from disciplines as diverse as business, engineering, economics, sociology, and psychology. On the whole, each discipline pursues its own pathway to understanding without an interdisciplinary framework that links diverse research outputs. This partite structure creates a remove from the practical realities of entrepreneurship and the innovators who operate and perceive innovation in its entirety. This book delivers insights and creates a different framework, one that includes terminologies and typologies, greater understanding of paradigmatic influences in science, needs vs. wants, and demand, impact, and value of knowledge, publications, and patents, and economic benefits. It challenges current approaches to education, research, creativity, and skills development, infrastructure, investment, and policy. This book addresses changes needed to better deliver innovation at a time when the world is desperate for solutions to global problems. It will be of interest to scholars and students of innovation from multiple disciplines, as well as practitioners, policymakers, and all those with an interest in scientific innovation. The first volume focuses on the processes, the means, and the impact of scientific innovation. It highlights the way scientific research came to the fore as an instrument of government policy for economic growth, the way research is undertaken, the structures and processes involved, the values, biases, and limitations associated with them, and why these matter for innovation. Questions are asked about who innovation is for and whether value is being captured in ways that really matter, whether the systems are fit for purpose, and how meaningful impact could be delivered to
