**Gravity** is the force by which a planet or other body draws objects toward its center.

**Gravity** is what holds the planets in orbit around the sun and what keeps the moon in orbit around the Earth.

In 1687 **Isaac Newton** formulated the **Gravitational Theory** holding that the force of attraction between two bodies is proportional to the product of their masses.

To calculate the force of gravity, physicists use the formula  **$f = ma$**  (*force = mass x acceleration*).
