Belotserkovskii, 1985 Rarefied Gas Dynamics. Volume II. Proceedings of the Third International Symposium on Rarefied Gas Dynamics, Held at the Palais de L'Unesco, Paris, in 1962 J. A. Fisher, 1981 **Nuclear Science Abstracts**, 1975-10 **Transport Theory** Richard Bellman, Garrett Birkhoff, Ibrahim Abu-Shumays, American Mathematical Society, Society for Industrial and Applied Mathematics, 1969 The industrial and military applications of atomic energy have stimulated much mathematical research in neutron transport theory The possibility of controlled thermonuclear processes has similarly focussed attention upon plasmas sometimes called the fourth state of matter Independently many classical aspects of kinetic theory and radiative transfer theory have been studied both because of their basic mathematical interest and of their physical applications to areas such as upper atmosphere meteorology introduction **International Symposium on Rarefied Gas Dynamics (8th) Held at Stanford University, Stanford, California on July 10-14, 1972. Book of Abstracts** K. Karamcheti, STANFORD UNIV CALIF DEPT OF AERONAUTICS AND ASTRONAUTICS., 1972 The abstracts of the contributed papers of the Eighth International Symposium on RGD comprise the contents of two volumes Volume 2 contains materials on gas solid interactions scattering flow past bodies and evaporation and condensation These books of abstracts constitute the only source of the complete record of the papers presented at the symposium The proceedings of the symposium contain in detail only some of the papers Author **Engine Emissions** George Springer, 2012-12-06 In recent years emissions from transportation engines have been studied widely because of the contribution of such engines to atmospheric pollution During this period the amounts of pollutants emitted the mechanism of their formation and means of controlling emissions have been investigated in industrial and government laboratories as well as at universities The results of these investigations have generally been published as individual articles in journals transactions meeting proceedings and frequently in company reports This proliferation of technical information makes it difficult for workers in the field to keep abreast of all developments For this reason the editors felt the need for a book which would survey the existing state of knowledge in wide albeit selected areas and would provide a guide to the relevant literature This book is intended to fulfill this function It is recognized that all aspects of transportation engine emissions cannot be explored in a single volume In this book attention is focused primarily on sources and mechanisms of emission formation within the combustion process and on measurement techniques Beyond this objective no restrictions were placed on the authors Within the framework of the general theme each author has been free to treat his subject as he saw fit The editors have not strived to replace by uniformity the highly

personal and attractive divergences of style Considerable efforts were made however to ensure clarity and minimum overlap between the chapters

**Rarefied Gas Dynamics** Carlo Cercignani, 2000-02-28 The aim of this book is to present the concepts methods and applications of kinetic theory to rarefied gas dynamics After introducing the basic tools problems in plane geometry are treated using approximation techniques perturbation and numerical methods These same techniques are later used to deal with two and three dimensional problems The models include not only monatomic but also polyatomic gases mixtures chemical reactions A special chapter is devoted to evaporation and condensation phenomena Each section is accompanied by problems which are mainly intended to demonstrate the use of the material in the text and to outline additional subjects results and equations This will help ensure that the book can be used for a range of graduate courses in aerospace engineering or applied mathematics
