## Rings With Polynomial Identities:

**Rings with Polynomial Identities and Finite Dimensional Representations of Algebras** Eli Aljadeff, Antonio Giambruno, Claudio Procesi, Amitai Regev, 2020-12-14 A polynomial identity for an algebra or a ring  $A$  is a polynomial in noncommutative variables that vanishes under any evaluation in  $A$ . An algebra satisfying a nontrivial polynomial identity is called a PI algebra and this is the main object of study in this book which can be used by graduate students and researchers alike. The book is divided into four parts. Part 1 contains foundational material on representation theory and noncommutative algebra. In addition to setting the stage for the rest of the book, this part can be used for an introductory course in noncommutative algebra. An expert reader may use Part 1 as reference and start with the main topics in the remaining parts. Part 2 discusses the combinatorial aspects of the theory: the growth theorem and Shirshov's bases. Here methods of representation theory of the symmetric group play a major role. Part 3 contains the main body of structure theorems for PI algebras: theorems of Kaplansky and Posner, the theory of central polynomials, M. Artin's theorem on Azumaya algebras and the geometric part on the variety of semisimple representations including the foundations of the theory of Cayley-Hamilton algebras. Part 4 is devoted first to the proof of the theorem of Razmyslov, Kemer and Braun on the nilpotency of the nil radical for finitely generated PI algebras over Noetherian rings, then to the theory of Kemer and the Specht problem. Finally, the authors discuss PI exponent and codimension growth. This part uses some nontrivial analytic tools coming from probability theory. The appendix presents the counterexamples of Golod and Shafarevich to the Burnside problem.

**Polynomial Identities in Ring Theory**, 1980-07-24 **Polynomial Identities in Ring Theory** **Rings with Polynomial Identities** Claudio Procesi, 1973 **Polynomial Identity Rings** Vesselin Drensky, Edward Formanek, 2012-12-06 A ring  $R$  satisfies a polynomial identity if there is a polynomial  $f$  in noncommuting variables which vanishes under substitutions from  $R$ . For example, commutative rings satisfy the polynomial  $f(x, y) = xy - yx$  and exterior algebras satisfy the polynomial  $f(x, y, z) = xyz - zxy - yxz + zyx$ . Satisfying a polynomial identity is often regarded as a generalization of commutativity. These lecture notes treat polynomial identity rings from both the combinatorial and structural points of view. The former studies the ideal of polynomial identities satisfied by a ring  $R$ . The latter studies the properties of rings which satisfy a polynomial identity. The greater part of recent research in polynomial identity rings is about combinatorial questions and the combinatorial part of the lecture notes gives an up-to-date account of recent research. On the other hand, the main structural results have been known for some time and the emphasis there is on a presentation accessible to newcomers to the subject. The intended audience is graduate students in algebra and researchers in algebra, combinatorics and invariant theory.

**Polynomial Identities** Ney Borba,1972 *The Polynomial Identities and Invariants of  $n \times n$  Matrices* Edward Formanek,1991 The theory of polynomial identities as a well defined field of study began with a well known 1948 article of Kaplansky The field has since developed along two branches the structural which investigates the properties of rings which satisfy a polynomial identity and the varietal which investigates the set of polynomials in the free ring which vanish under all specializations in a given ring This book is based on lectures delivered during an NSF CBMS Regional Conference held at DePaul University in July 1990 at which the author was the principal lecturer The first part of the book is concerned with polynomial identity rings The emphasis is on those parts of the theory related to  $n \times n$  matrices including the major structure theorems and the construction of certain polynomials identities and central polynomials for  $n \times n$  matrices The ring of generic matrices and its centre is described The author then moves on to the invariants of  $n \times n$  matrices beginning with the first and second fundamental theorems which are used to describe the polynomial identities satisfied by  $n \times n$  matrices One of the exceptional features of this book is the way it emphasizes the connection between polynomial identities and invariants of  $n \times n$  matrices Accessible to those with background at the level of a first year graduate course in algebra this book gives readers an understanding of polynomial identity rings and invariant theory as well as an indication of current problems and research in these areas Jordan Rings with Polynomial Identities Bruce Dudley Smith,1975 *Lectures on Quotient Rings and Rings with Polynomial Identities* Alfred W.
