D'Abro, 1951 Written for intelligent readers not familiar with higher mathematics it is the only thorough explanation in non technical language of modern mathematical physical theory Combining both history and exposition it ranges from classical Newtonian concepts up through the electronic theories of Dirac and Heisenberg the statistical mechanics of Fermi and Einstein s relativity theories **The Rise of the New Physics. D'Abro, 1951 *Physics and the Rise of Scientific Research in Canada* Yves Gingras, 1991-03-01 The teaching of engineering and a change in liberal arts curricula both stimulated by industrial growth encouraged the creation of specialized courses in the sciences By the 1890s Gingras argues trained researchers had begun to appear in Canadian universities The technological demands of the First World War and the founding in 1916 of the National Research Council of Canada NRC accelerated the growth of scientific research The Transactions of the Royal Society of Canada could no longer publish everything submitted to it because of the disproportionately large number of research papers from the fields of science In response the NRC created the Canadian Journal of Research a journal specifically dedicated to the publication of scientific research By 1930 a stable national system of scientific research was in place in Canada Following the dramatic increase in the national importance of their disciplines scientists faced the problem of social identity Gingras demonstrates that in the case of physics this took the form of a conflict between those who promoted a professional orientation necessary to compete successfully with engineers in the labour market and those mainly in the universities who were concerned with problems of the discipline such as publication internal management and awards *Physics and the Rise of Scientific Research in Canada* is the first book to provide a general analysis of the origins of scientific research in Canadian universities Gingras proposes a sociological model of the formation of scientific disciplines distinguishing the profession from the discipline two notions often confused by historians and sociologists of science **the Rise of the New Physics** ,1951 **The Rise of Modern Physics** Henry Crew, 1928 [The New Physics](#) Arthur Erich Haas, 1930 **Redirecting Science: Niels Bohr, Philanthropy, and the Rise of Nuclear Physics** Finn Aaserud, 2019-08-17 How and why do complex scientific disciplines such as physics change emphasis from one sub discipline to another Do such transitions stem entirely from developments within the

discipline itself or also from external factors This book addresses these questions by examining the transition from atomic to nuclear physics theoretically and experimentally at Niels Bohr s Institute for Theoretical Physics in Copenhagen in the 1930s On the basis of extensive archival research Finn Aaserud shows that the Copenhagen spirit the playful research atmosphere under Bohr s fatherly guidance that permeated the Institute thrived because of extra scientific circumstances that Bohr exploited to the fullest such as the need to help Jewish physicists out of Hitler s Germany and the changing funding policies of private foundations notably those of the Rockefeller Foundation which made it opportune to introduce research in experimental biology at the Institute A clear carefully developed and substantially convincing argument Aaserud gives a detailed and impressively documented account of the direction of Bohr s scientific interests Aaserud is to be congratulated for his original clear indeed didactic work of scholarship and enlightenment Paul Forman *Physics Today* A professional historian s study of the happenings at the Niels Bohr Institute in the decisive years 1930 to 1940 In particular the support of the Institute by Danish and other foundations mainly the Rockefeller Foundation are treated in great detail revealing many interesting aspects of these relationships The detailed accounts of Bohr s negotiations are a testimony to Bohr s uncanny ability to get what he wanted from the various foundations Aaserud s book is an invaluable source of information showing that Bohr was not only an inspiring physicist and philosopher but also a cunning negotiator who knew how to make use of his great reputation for the benefit of science Victor F Weisskopf *Science* Aaserud elucidates Bohr s skills not only as mentor and guiding hand behind the Copenhagen spirit but also as financial negotiator Neil Wasserman *Isis A Journal of the History of Science Society* This book teaches us that running such a truly elite institution required entrepreneurial skills as well as scientific genius Bohr had an abundance of both Jeremy Bernstein *Nature* Redirecting Science is the history of Bohr s institute during the 1930s when it experienced a drastic change in its research priorities from a laissez faire mode of work and lack of clearly defined research programme to a concerted research effort in nuclear physics and experimental biology Aaserud gives a highly interesting account of the interaction between physics and biology Aaserud s carefully documented work is an excellent example of how institutional history may transcend social and institutional limitations and integrate also conceptual history of science Helge Kragh *Centaurus* By showing that a new research programme at one of the most important scientific institutes in the world was triggered and pushed forward by social and financial considerations this book delivers yet another blow to the tired old idea that scientific knowledge is driven by its own internal inexorable logic It also throws valuable light on Bohr s activities and strategies as a fundraiser and institution builder John Krige *The British Journal for the History of Science*

The Thermodynamics of Electrical Phenomena in Metals, and A Condensed Collection of Thermodynamic Formulas Percy Williams Bridgman,1961 **A Course in Mathematical Analysis: pt.2. Differential equations.** [c1917 Edouard Goursat,1916 **The Rise and Fall of American Technology** Lynn G. Gref,2010 He contrasts the commonly held perception that the pace of technology is accelerating with the historical record

He highlights the people and the organizations which are responsible for America's technological largesse. The book follows the money to uncover the underlying trends. The beginning of a decline in technology development is detected using indirect indicators for clues. Impacts on the formation of companies, employment, and productivity provide sobering reasons to enlighten others and demand a change in course. After considering the possibilities, the book proposes several constructive actions which avoid the proverbial tendency to throw more money at the problem. The goal of the book is to provoke discussion and promote action where appropriate. Americans' standard of living is at stake. Tech-savvy readers will want to understand this issue so as to influence others. Long-range thinkers will want to factor these considerations into their prognostications. The titans of the technology-based companies can develop new and improved strategies based on the findings of this book. And our elected officials may want to act before a catastrophic disaster confronts the nation. This book will strike a chord with everyone who is interested in America's future economic health. Specific audience groups include scientists, engineers, entrepreneurs, employees in technology-based companies, government and corporate policymakers deciding the future of research and development, R & D programs, government workers involved in the execution of government R & D programs, and those thinking about a career in R & D. It is complementary to such works as *Politics and Economics in America: The Way We Came to Be* by Richard E. Carmichael, Krieger Publishing Company, 1998, which explores political and economic history in order to explain the emergence of the United States' world economic dominance. Carmichael's book makes recommendations on how government could assist America's businesses in maintaining our economic leadership, but it does not address any aspects of technology development and associated issues. *Closing the Innovation Gap* by Judy Estrin, McGraw-Hill, 2009, provides business leaders with concepts for leading their organizations so as to close the innovation gap with competitors. It focuses on the innovation environment within the organization, whereas Dr. Gref addresses the complete technology development cycle, its financing, America's rise to global dominance, and the specter of a national decline.
