Mammalian Cell Genetics:

Mammalian Cell Genetics Martin L. Hooper, 1985 This book presents a comprehensive treatment of the genetic analysis of mammalian cells cultured as independent microorganisms It bridges the gap between introductory texts and advanced works which describe selected aspects of the subject **Gene Transfer Vectors for Mammalian Cells** Jeffrey H. Miller, Michele P. Calos, 1987 **Molecular Genetics of Mammalian Cells** George M. Malacinski, Christian C. Simonsen, Michael Shepard, 1986 Gene Transfer and Expression in Mammalian Cells S.C. Makrides, 2003-10-24 The production of proteins in mammalian cells is an important tool in numerous scientific and commercial areas For example proteins for human therapy vaccination or diagnostic applications are typically produced in mammalian cells Gene cloning protein engineering biochemical and biophysical characterization of proteins also require the use of gene expression in mammalian cells Other applications in widespread use involve screening of libraries of chemical compounds in drug discovery and the development of cell based biosensors This book presents a state of the art comprehensive coverage of the technical aspects of gene expression in mammalian cells written by experienced scientists working at the forefront of the field *Gene Amplification in Mammalian Cells* Rodney E. Kellems, 2020-08-26 Serves as a comprehensive review to the substantial impact of gene amplification in molecular biology genetic engineering and medical science The book covers the mechanism of gene amplification organization and structure of amplified genes Molecular Genetics of Mammalian Cells Michael M. Gottesman, 1987 Strategies needed to isolate mutant cell lines and to use the mutants to clone and map the genes are presented in detail This is the first book in which such methodology and molecular biology are combined The preferred cell lines for genetic analysis are presented in the first section followed by special techniques for isolating a wide range of mutants The remainder of the book is devoted to genetic mapping and cloning of mutant genes The final section presents special techniques in gene regulation *Mammalian Cell Genetics* Martin L. Hooper, 1985 This book presents a comprehensive treatment of the genetic analysis of mammalian cells cultured as independent microorganisms It bridges the gap between introductory texts and advanced works which describe selected aspects of the subject **Molecular Genetics of Mammalian Cells** Michael M. Gottesman, 1987 **Gene Expression and Regulation in Mammalian Cells** Fumiaki Uchiumi, 2018-02-21 Central dogma was presented by Dr Francis Crick 60 years ago The information of nucleotide sequences on DNAs is transcribed into RNAs by RNA polymerases We learned the mechanisms of how transcription determines function of proteins and behaviour of cells and even how it brings appearances of organisms This book is intended for scientists and medical researchers especially who are interested in the relationships between transcription and human diseases This volume consists of an introductory chapter and 14 chapters divided into 4 parts Each chapter is written by experts in the basic scientific field A collection of articles presented by active and laboratory based investigators provides recent advances and progresses in the field of transcriptional regulation in mammalian cells **Approaches to the Genetic Analysis of**
