Office for Subject Cataloging Policy, 1998 Microsurgery of CNS Tumors Mahmut Gazi Yaşargil, 1996 **Surgery of the Intracranial Venous System** Akira Hakuba, 1996-01-27 Recent years have seen remarkable advances in neurosurgery and these advances

have increasingly illuminated the importance of the role of the venous system. Until now the main focus of neurosurgery has been directed to arteries such as those feeding tumors but it is now clear that some lesions that had been considered contusional hemorrhage caused by surgical manipulation were in fact hemorrhagic infarctions resulting from impaired venous circulation. In addition the concept of venous hypertension has emerged as a mechanism of neurological impairment in patients with arteriovenous malformations in the brain or spinal cord. Great strides have also been made in neuroradiological diagnosis with the introduction of magnetic resonance imaging. For example the exact location of tumors and the degree of invasion of sinuses can now be determined prior to surgery. Thus new operative techniques are being developed that benefit from such detailed information. This book presents material from a wide range of fields including embryology, anatomy, pathophysiology, neuroradiology, diagnosis and treatment. It is hoped that the reviews of pioneering work on the intracranial venous system presented here will prove invaluable for further development of new operative techniques.

In view of this urgent demand this monograph has been compiled on the basis of recent research done by Chinese colleagues in the fields of microsurgery and related anatomical sciences from more than fourteen medical colleges in the hope of providing a complete set of anatomical data covering most areas of modern microsurgery. This volume presents thirteen chapters dealing with the applied anatomy of free skin flap, muscle, bone and omental grafting and of intestinal and small organ transplantation including reconstruction of the thumb using toes. Space is also devoted to the microsurgical anatomy of the central and peripheral nervous systems, the lymphatic system and the middle ear. To help understanding 212 illustrations involving 21 photographic plates are included. The authors are particularly indebted to Professors He Guangchi and Zhao Minxue for their valuable suggestions and revision of the manuscript and also to the late Professor Yang Dongyue for his personal contribution in the field of microsurgery and everlasting inspiration.
