Bleimann, 2008 *Technology and Corporate Law* Godwin, Andrew, Lee, Pey W., Langford, Rosemary Teele, 2021-08-27 In light of the overwhelming impact of technology on modern life this thought provoking book critically analyses the interaction of innovation technology and corporate law It highlights the impact of artificial intelligence and distributed ledgers on corporate governance and form examining the extent to which technology may enhance or displace conventional theories and practices concerning corporate governance and regulation Expert contributors from multiple jurisdictions identify themes and challenges that transcend national boundaries and confront the international community as a whole **Trends in Distributed Systems: Towards a Universal Service Market** Claudia Linnhoff-Popien, Heinz-Gerd Hegering, 2006-12-30 USM 2000 is the third event in a series of international IFIP GI conferences on Trends in Distributed Systems Following the venues in Aachen Germany 1996 and Hamburg Germany 1998 this event in Munich considers the trend towards a Universal Service Market USM 2000 The

trend towards a universal service market has many origins e.g. the integration of telecom and data communications the deregulation efforts with respect to telco markets the globalization of information the virtualization of companies the requirement of a short time to market the advances in network technologies the increasing acceptance of e-commerce and the increase in mobility. This leads to new business-to-business (B2B) and business-to-customer (B2C) environments that offer both challenges and opportunities to enterprises and end users. There is the need for ubiquitous services trading, brokering and information management for service market and business models and for flexible infrastructures for dynamic collaboration. Researchers, service vendors and users must cooperate to set up the appropriate requirements for a universal service market and to find solutions with respect to supporting platforms, middleware, distributed applications and management. The basis for these solutions is a common understanding of means for defining, creating, implementing and deploying the service market. Then service market makers, service aggregators, service auctioneers, ISP, ASP, BPO and customers can freely interact in a dynamic, open and universal market place.
