*Sustainable Aviation Technology and Operations* Roberto Sabatini,Alessandro Gardi,2023-09-12 Sustainable Aviation Technology and Operations Comprehensively covers research and development initiatives to enhance the environmental sustainability of the aviation sector Sustainable Aviation Technology and Operations provides a comprehensive and timely outlook of recent research advances in aeronautics and air transport with emphasis on both long term sustainable development goals and current achievements This book discusses some of the most promising advances in aircraft technologies air traffic management and systems engineering methodologies for sustainable aviation The topics covered include propulsion aerodynamics avionics structures materials airspace management biofuels and sustainable lifecycle management The physical processes associated with various aircraft emissions including air pollutants noise and contrails are presented to support the development of computational models for aircraft design flight path optimization and environmental impact assessment Relevant advances in systems engineering and lifecycle management processes are also covered bridging some of the existing gaps between academic research and industry best practices A collection of research case studies complements the book highlighting opportunities for a timely uptake of the most promising technologies towards a more efficient and environmentally sustainable aviation future Key features Contains important research and industry relevant contributions from world class experts Addresses recent advances in aviation sustainability including multidisciplinary design approaches and multi objective operational optimisation methods Includes a number of research case studies addressing propulsion aerostructures alternative aviation fuels avionics air traffic management and sustainable lifecycle management solutions Sustainable Aviation Technology and Operations is an excellent book for aerospace engineers aviation scientists researchers and graduate students involved in the field

Multibody Dynamics Krzysztof Arczewski,Wojciech Blajer,Janusz Fraczek,Marek Wojtyra,2010-11-08 The ECCOMAS Thematic Conference Multibody Dynamics 2009 was held in Warsaw representing the fourth edition of a series which began in Lisbon 2003 and was then continued in Madrid 2005 and Milan 2007 held under the auspices of the European Community on Computational Methods in Applied Sciences ECCOMAS The conference provided a forum for exchanging ideas and results of several topics related to computational methods and applications in multibody dynamics through the participation of 219 scientists from 27 countries mostly from Europe but also from America and Asia This book contains the revised and extended versions of invited conference papers reporting on the state of the art in the advances of computational multibody models from the theoretical developments to practical engineering applications By providing a helpful overview of the most active areas and the recent

efforts of many prominent research groups in the field of multibody dynamics this book can be highly valuable for both experienced researchers who want to keep updated with the latest developments in this field and researchers approaching the field for the first time *Recent Advances in Research on Unmanned Aerial Vehicles* Fariba Fahroo, Le Yi Wang, George Yin, 2013-04-10 A team of launched and coordinated Unmanned aerial vehicles UAVs requires advanced technologies in sensing communication computing and control to improve their intelligence and robustness towards autonomous operations To enhance reliability robustness and mission capability of a team of UAVs a system oriented and holistic approach is desirable in which all components and subsystems are considered in terms of their roles and impact on the entire system This volume aims to summarize the recent progress identify challenges and opportunities and develop new methodologies and systems on coordinated UAV control A group of experts working in this area have contributed to this volume in several related aspects of autonomous control of networked UAVs Their papers introduce new control methodologies algorithms and systems that address several important issues in developing intelligent autonomous or semi autonomous networked systems for the next generation of UAVs The papers share a common focus on improved coordination of the members of the networked system to accomplish a common mission to achieve heightened capability in system reconfiguration to compensate for lost members or connections and to enhance robustness against terrain complications and attacks
