Brown,John H. Greenwood,2002 After price and delivery time the most frequently asked question about a product is How long will it last Lifetime expectancy is often many years the service conditions may be complex and there is a scarcity of definitive data on durability The situation is complicated by the fact that there are a vast number of degradation agents service conditions properties of importance and different plastics There are many inherent difficulties in designing durability tests In many cases the time scale involved is such that accelerated test conditions are essential Whilst large amounts of durability data are generated by accelerated methods much of it is only useful for quality control purposes and relatively little has been validated as being realistically capable of representing service Most assessments of the lifetime of plastics are made by considering some measure of performance such as impact strength and specifying some lower limit for the property which is taken as the end point Lifetime is not necessarily measured in time For example for some products it will be thought of as the number of cycles of use The object of this publication is to provide practical guidance on assessing the useful service life of plastics It describes test procedures and extrapolation techniques together with the inherent limitations and problems The Guide aims to make available the wealth of information that can be applied to help maximise the effectiveness of a durability testing programme This guide seeks to be comprehensive but concentrates on the most common environmental effects causing degradation The test procedures used are outlined and the relevant textbooks and international standards are well referenced Examples of lifetime testing studies are cited The Practical Guide will be useful for anyone responsible for designing manufacturing or testing plastic components It will also be of benefit to suppliers and users of end products as assessment of useful lifetime is critical to the economics and safety aspects of any component Key features Test methods outlined Accelerated testing discussed Prediction methods described Standards cited Key sources of information listed      *Document Recognition and Retrieval* ,2004      **Subject Guide to Books in Print** ,1991      *Guide to American & International Directories* ,2006      **Federal Register** ,2012-06      **S & P 500 ...
