Handbook of Recycling Ernst Worrell, Markus A. Reuter, 2014-04-28 Winner of the International Solid Waste Association's 2014 Publication Award Handbook of Recycling is an authoritative review of the current state of the art of recycling reuse and reclamation processes commonly implemented today and how they interact with one another The book addresses several material flows including iron steel aluminum and other metals pulp and paper plastics glass construction materials industrial by products and more It also details various recycling technologies as well as recovery and collection techniques To completely round out the picture of recycling the book considers policy and economic implications including the impact of recycling on energy use sustainable development and the environment With contemporary recycling literature scattered across disparate unconnected articles this book is a crucial aid to students and researchers in a range of disciplines from materials and environmental science to public policy studies Portrays recent and emerging technologies in metal recycling by product utilization and management of post consumer waste Uses life cycle analysis to show how to reclaim valuable resources from mineral and metallurgical wastes Uses examples from current professional and industrial practice with policy and economic implications

Why Do We Recycle? Frank Ackerman, 2013-04-15 The earnest warnings of an impending solid waste crisis that permeated the 1980s provided the impetus for the widespread adoption of municipal recycling programs Since that time America has witnessed a remarkable rise in public participation in recycling activities including curbside collection drop off centers and commercial and office programs Recently however a backlash against these programs has developed A vocal group of anti recyclers has appeared arguing that recycling is not an economically efficient strategy for addressing waste management problems In *Why Do We Recycle* Frank Ackerman examines the arguments for and against recycling focusing on the debate surrounding the use of economic mechanisms to determine the value of recycling Based on previously unpublished research conducted by the Tellus

Institute a nonprofit environmental research group in Boston Massachusetts Ackerman presents an alternative view of the theory of market incentives challenging the notion that setting appropriate prices and allowing unfettered competition will result in the most efficient level of recycling Among the topics he considers are externality issues unit pricing for waste disposal effluent taxes virgin materials subsidies advance disposal fees the landfill crisis and disposal facility siting container deposit bottle bill legislation environmental issues that fall outside of market theory calculating costs and benefits of municipal recycling programs life cycle analysis and packaging policy Germany's Green Dot packaging system and producer responsibility the impacts of production in extractive and manufacturing industries composting and organic waste management economics of conservation and material use and long term sustainability Ackerman explains why purely economic approaches to recycling are incomplete and argues for a different kind of decisionmaking one that addresses social issues future as well as present resource needs and non economic values that cannot be translated into dollars and cents Backed by empirical data and replete with specific examples the book offers valuable guidance for municipal planners environmental managers and policymakers responsible for establishing and implementing recycling programs It is also an accessible introduction to the subject for faculty students and concerned citizens interested in the social economic and ethical underpinnings of recycling efforts

organizations with their intricate interplay between human and technological components require a unique approach to BI. This book embarks on a comprehensive journey revealing how BI tools empower these entities to decipher the complexities of their data landscape. From user behavior to social interactions, technological systems to environmental factors, this work sheds light on the multifaceted sources of information that inform organizational strategies. Decision makers within socio-technical organizations leverage BI insights to discern patterns, spot trends, and uncover correlations that influence operations and the intricate social dynamics within their entities. Research covering real-time monitoring and predictive analytics equips these organizations to respond swiftly to demands and anticipate future trends, harnessing the full potential of data. The book delves into their design, development, and architectural nuances, illuminating these concepts through case studies. This book is ideal for business executives, entrepreneurs, data analysts, marketers, government officials, educators, and researchers.

Urban Recycling and the Search for Sustainable Community Development Adam S. Weinberg, David N. Pellow, Allan Schnaiberg, 2000-07-24. More Americans recycle than vote. And most do so to improve their communities and the environment. But do recycling programs advance social, economic, and environmental goals? To answer this, three sociologists with expertise in urban and environmental planning have conducted the first major study of urban recycling. They compare four types of programs in the Chicago metropolitan area: a community-based drop-off center, a municipal curbside program, a recycling industrial park, and a linkage program. Their conclusion, admirably elaborated, is that recycling can realize sustainable community development, but that current programs achieve few benefits for the communities in which they are located. The authors discover that the history of recycling mirrors many other urban reforms. What began in the 1960s as a sustainable community enterprise has become a commodity-based, profit-driven industry. Large private firms using public dollars have chased out smaller, nonprofit, and family-owned efforts. Perhaps most troubling is that this process was not born of economic necessity. Rather, as the authors show, socially oriented programs are actually more viable than profit-focused systems. This finding raises unsettling questions about the prospects for any sort of sustainable local development in the globalizing economy. Based on a decade of research, this is the first book to fully explore the range of impacts that recycling generates in our communities. It presents recycling as a tantalizing case study of the promises and pitfalls of community development. It also serves as a rich account of how the state and private interests linked to the global economy alter the terrain of local neighborhoods.
