increasing world population competition for arable land and rich fishing grounds and environmental concerns mandate that we exploit in a sustainable way the earth's available plant and animal resources for human consumption. To that end, food chemists, technologists, and nutritionists engage in a vast number of tasks related to food availability, quality, safety, nutritional value, and sensory properties, as well as those involved in processing, storage, and distribution. To assist in these functions, it is essential they have easy access to a collection of information on the myriad compounds found in foods. This is particularly true because even compounds present in minute concentrations may exert significant desirable or negative effects on foods.

Includes a foreword by Zdzislaw E. Sikorski, Gdansk University of Technology, Poland, Editor of the CRC Press *Chemical Functional Properties of Food Components Series Dictionary of Food Compounds*, Second Edition. It is presented in a user-friendly format in both hard copy and fully searchable, downloadable resources.
