**Networking Services Developer's Reference Library**

David Iseminger, 2000 This five volume reference set helps developers build applications that capitalize on the networking features and components of Windows. Crammed full of useful information and organized in a sensible fashion, this library provides timely information about networking technologies that are entirely new or largely revamped for Windows 2000. It also documents existing technologies that network-enabled applications use every day and excerpts appropriate information from the Microsoft Platform SDK, making this one of the most focused print resources available about Windows 2000 based networking technologies.

Microsoft Win32 Application Programming Interface: Reference H-Z; DDE transaction type, messages, notifications, structures, types and macros Microsoft Press, 1992

32-bit Windows runs on many different microprocessors with minimal code changes and can multi-process indefinitely. It has no inherent memory or processor restrictions. Volume 2 completes the alphabetical API reference P-Z and includes information on system messages, resources, and tools.

Microsoft Win32 Application Programming Interface: Overview; Guide to programming; Reference, A-G, 1992

Developers can get a jump on 32-bit programming with this detailed reference to the pre-release version of the Microsoft Win32 API. It's a first look at the programming architecture designed to enable Windows-based applications to run on a broad range of computing platforms, from battery-operated portables to high-end RISC workstations and multiprocessor servers. Volume 1 (497-645) contains an overview, the programming guide, and the alphabetic API reference from A-G. Volume 2 (498-445) contains the API reference from H-Z and includes information on DDE transaction type, messages, notifications, structures, types, and macros.
