Recombination Of Atomic Ions:

Recombination of Atomic Ions W.G. Graham, W. Fritsch, Y. Hahn, J.A. Tanis, 2012-12-06 This book is based on contributions to the NATO Advanced Research Workshop on Recombination of Atomic Ions This was held at the Slieve Donard Hotel in Newcastle Northern Ireland between 6 and 9 October 1991 and attracted 35 participants from 5 countries The book is intended to serve as an in depth review of work to this date on the subject of recombination of atomic ions both in collision with free electrons and with atoms It contains contributions from almost all groups which have made significant contributions in this area during the last decade In addition a synopsis of the discussion session following each of the main subject areas is presented The material is organized into several themes an overview of the subject area theoretical aspects of recombination experimental measurements of electron ion recombination and experimental measurements of recombination in ion atom collisions We would like to acknowledge the sponsorship of the NATO Scientific Affairs Division We would like to thank the Northern Ireland Tourist Board and the Queen's University of Belfast for providing some additional funding Finally we would like to thank all the contributors to these proceedings for their efforts in preparing the manuscripts and their assistance in the editing process

Recombination of atomic ions in a low pressure helium afterglow Rhett Burton, 1972 *Atomic and Molecular Collision Theory* Franco A. Gianturco, 2012-12-06 Until recently the field of atomic and molecular collisions was left to a handful of practitioners who essentially explored it as a branch of atomic physics and gathered their experimental results mainly from spectroscopy measurements in bulk But in the past ten years or so all of this has dramatically changed and we are now witnessing the rapid growth of a large body of research that encompasses the simplest atoms as well as the largest molecules that looks at a wide variety of phenomena well outside purely spectroscopic observation and that finds applications in an unexpectedly broad range of physico chemical and physical processes The latter are in turn surprisingly close to very important sectors of applied research such as the modeling of molecular lasers the study of isotope separation techniques and the energy losses in confined plasmas to mention just a few of them As a consequence of this healthy state of affairs greatly diversified research pathways have developed however their specialized problems are increasingly at risk of being viewed in isolation although they are part of a major and extended branch of physics or chemistry This is particularly true when it comes to the theory of this work where well established methods and models of one subfield are practically unknown to researchers in other subfields and consequently the danger of wasteful duplication arising is quite real

Electron-ion Recombination of Low-charged Heavy Atomic Ions at the Cryogenic Storage Ring Leonard Isberner, 2025

Dissociative Recombination of Molecular Ions with Electrons Steven L. Guberman, 2012-12-06 Dissociative Recombination of Molecular Ions with Electrons is a comprehensive collection of refereed papers describing the latest developments in dissociative recombination research The papers are written by the leading

researchers in the field The topics covered include the use of microwave afterglows merged beams and storage rings to measure rate coefficients and to identify the products and their yields The molecules studied range in size from the smallest H₂ to bovine insulin ions The theoretical papers cover the important role of Rydberg states and the use of wave packets and quantum defect theory to deduce cross sections rate constants and quantum yields Several theoretical and experimental papers address the controversial topic of H₃ dissociative recombination and its importance in the interstellar medium Dissociative recombination studies of other molecular ions in the interstellar medium and in cometary and planetary atmospheres are covered Ionization is an important competitive process to dissociative recombination and its competition with predissociation and its role in the reverse process of the association of neutral species is presented Dissociative attachment in which an electron attaches to a neutral molecule has many similarities to dissociative recombination The topics covered include the accurate calculation of electron affinities attachment to molecules clusters and to species absorbed on solid surfaces and electron scattering by a molecular anion
