Planets And Perception:

Planets and Perception William Sheehan, 2022-05-03 Astronomy Book of the Year Mercury Magazine Astronomical Society of the Pacific Do we really know what we see through a telescope How does the ocular system construct planetary images and how does the brain interpret them Drawing on both astronomical and psychological data William Sheehan offers the first systematic analysis of the perceptual and cognitive factors that go into the initial structuring of a planetary image and its subsequent elaboration Sheehan details the development of lunar and planetary astronomy beginning with Galileo's study of the moon and focuses particularly on the discover of canals on Mars Through each episode he underscores a perceptual or psychological theme such as the importance of differences in vision tachistoscopic perceptual effects the influence of expectation and suggestion on what one sees and the social psychology of scientific discovery **Planets and Perception** is a provocative book that will intrigue anyone who has ever looked through a telescope In addition it offers the psychologically oriented reader a case history in the processes of perception unlike any other in the literature

Progress and Values in the Humanities Volney Patrick Gay, 2010 Money and support tend to flow in the direction of economics science and other academic departments that demonstrate measurable progress The humanities on the other hand offer more abstract and uncertain outcomes A humanist's objects of study are more obscure in certain ways than pathogens and cells Consequently it seems as if the humanities never truly progress Is this a fair assessment By comparing objects of science such as the brain the galaxy the amoeba and the quark with objects of humanistic inquiry such as the poem the photograph the belief and the philosophical concept Volney Gay reestablishes a fundamental distinction between science and the humanities He frees the latter from its pursuit of material based progress and restores its disciplines to a place of privilege and respect Using the metaphor of magnification Gay shows that while we can investigate natural objects to the limits of imaging capacity magnifying cultural objects dissolves them into noise In other words cultural objects can be studied only within their contexts and through the prism of metaphor and narrative Gathering examples from literature art film philosophy religion science and psychoanalysis Gay builds a new justification for the humanities By revealing the unseen and making abstract ideas tangible the arts create meaningful wholes which itself is a form of progress
