*Improvised Energy Efficient Routing Protocol based on Ant Colony Optimization (ACO) for Wireless Sensor Networks* Anand Nayyar, 2017-12-22 Doctoral Thesis Dissertation from the year 2017 in the subject Computer Science Miscellaneous course Ph D Computer Science language English abstract

Routing and Energy Efficiency is regarded as highly challenging area of Sensor networks Significant advancements in Wireless Sensor Networks WSNs opens doors for wide implementation in real time applications like Industrial Monitoring Smart Cities development Underwater monitoring operations tracking objects and many more Energy Efficient routing is regarded as the most challenging task Sensor networks mostly operate in complex and dynamic environments and routing becomes tedious task to maintain as the network size increases Lots of routing protocols Reactive Proactive and Hybrid are proposed by researchers but every protocol faces some limitations in terms of energy routing packet delivery ratio and security Therefore to overcome all the routing issues the trend has shifted to Biological based Algorithms like Swarm Intelligence based techniques Ant Colony Optimization based routing protocols have demonstrated exceptional results in terms of performance when applied to WSN routing This thesis outlines routing protocols in sensor networks highlight the concept of Swarm Intelligence and presents various Ant Colony Optimization based routing protocols for sensor networks In addition to this we present Ant Colony based Energy Efficient routing protocol IEEMARP Improvised Energy Efficient Multipath Ant Based Routing Protocol for sensor networks The proposed protocol takes into consideration various performance metrics like Packet Delivery Ratio Throughput Energy Efficiency Routing Overhead and End to End delay Proposed protocol is simulated and tested using NS 2 35 simulator Simulation based results stated that IEEMARP routing

protocol is overall 16% more efficient in terms of Packet delivery ratio Energy Efficiency Throughput Routing Overhead and End to End delay as compared to other ACO based routing protocols In addition to this IEEMARP is highly reliable protocol to ensure timely delivery with acknowledgement packet exchange between source node to sink node and vice versa and also combats the issue of congestion and packet dropping to large extent
