The Problem of Reductionism in Science E. Agazzi, 2012-12-06 The topic to which this book is devoted is reductionism and not reduction The difference in the adoption of these two denominations is not contrary to what might appear at first sight just a matter of preference between a more abstract reductionism or a more concrete reduction terminology for indicating the same sUbject matter In fact the difference is that between a philosophical doctrine or perhaps simply a philosophical tenet or claim and a scientific procedure Of course this does not mean that these two fields are separated they are only distinct and this already means that they are also likely to be interrelated However it is useful to consider them separately if at least to better understand how and why they are interconnected Just to give a first example of difference we can remark that a philosophical doctrine is something which makes a claim and as such invites controversy and should in a way be challenged A scientific procedure on the other hand is something which concretely exists and as such must be first of all described interpreted understood defined precisely and analyzed critically this work may well lead to uncovering limitations of this procedure or of certain ways of conceiving or defining it but it does not lead to really challenging it

**The Problem of Reductionism in Science** Schweizerische Gesellschaft für Logik und Philosophie der Wissenschaften. Reductionism Richard H. Jones, 2000 Reductionism s approach brings together many of the most interesting questions today in philosophy consciousness and computers and in science issues of complexity and self organization It also presents a brief history of how reductionism has developed in Western philosophy and religion with reference to Indian philosophy on certain issues

**Reductionism and Systems Theory in the Life Sciences** Paul Hoyningen-Huene, Franz M. Wuketits, 2012-12-06 The present volume aims at giving a discussion of the problems of reductionism in contemporary life sciences It contains six papers which deals with reductionism in different fields of biological research Also the holistic perspective and the systems view is discussed in some

of the papers The message of this discussion is that whereas reductionism is indeed an important strategy the systems approach is needed It is argued by some of the authors that organisms are complex systems and not just heaps of molecules 50 that the analytical method does not suffice Recent developments in systems theory offer the possibility to install a more comprehensive view of living systems what can be seen particularly in the field of evolutionary biology It is true that any organismic activity is molecular this is to say that it is based on molecular mechanisms But it is also true that the whole organism displays certain patterns of behavior which are not just molecular Any organism can be described as a system of different levels of organization different levels of order and complexity and it is important therefore to study all of the organizational levels and to see their peculiarities It should be obvious however that there is not one problem of reductionism but that there are many problems linked together and that these problems appear at different levels of biological research and bio philosophical reflections

Analysis & the Fullness of Reality Richard H. Jones, 2013-03-18 Is the world nothing but matter pushing matter in a void Are humans nothing but soulless machines for the survival of genes Is the mind nothing but the brain Is all science reducible to physics Must scientists restrict the substance and structure of reality to physical forces Does society consist merely of individuals or are holistic forces also at work Is God really no more than a projection of nature society or our psyche Or in each case do new realities emerge that cannot be reduced Virtually every scholarly and popular book and magazine article on the mind science or religion touches on these issues of reductionism But for all the interest in the topic no in depth introduction of the subject exists The objective of this philosophical work is to fill that void This book attempts to provide one common framework for studying how the issue of reduction versus emergence arises in each of the areas in which it comes up the natural sciences philosophy of mind the social sciences and religion It tries to resolve some of the disputes by a new analysis differentiating five types of reductionism and antireductionism ontological structural theoretical conceptual and methodological To help clarify the issues a brief history of how reductionism and emergentism have developed in Western philosophy is also presented By distinguishing different types of reductionism and by examining the issues in all the areas of philosophical interest collectively rather than limiting the discussion to just one area the general issues surrounding reduction versus emergence become clearer This approach brings together many of the most interesting questions today in philosophy science and religious studies The attempt throughout the work is to present the reductionists and emergentists strongest case on each issue and to identify problems with both sides But it is argued that in the end the reductionists in each area currently have the weaker position The work concludes with a discussion of the centrality of nonreducible features in reality and asks whether science under a reductionist vision can ever explain the emergence of higher levels of phenomena

Cognitive Structures in Scientific Inquiry, 2016-08-01 This book is the second of two volumes devoted to the work of Theo Kuipers a leading Dutch philosopher of science Philosophers and scientists from all over the world thirty seven in all

comment on Kuipers philosophy and each of their commentaries is followed by a reply from Kuipers The present volume is devoted to Kuipers neo classical philosophy of science as laid down in his *Structures in Science* Kluwer 2001 Kuipers defends a dialectical interaction between science and philosophy in that he views philosophy of science as a meta science which formulates cognitive structures that provide heuristic patterns for actual scientific research including design research In addition Kuipers pays considerable attention to the computational approaches to philosophy of science as well as to the ethics of doing research Thomas Nickles David Atkinson Jean Paul van Bendegem Maarten Franssen Anne Ruth Mackor Arno Wouters Erik Weber Helena de Preester Eric Scerri Adam Grobler Andrzej Wisniewski Alexander van den Bosch Gerard Vreeswijk Jaap Kamps Paul Thagard Emma Ruttkamp Robert Causey Henk Zandvoort comment on these ideas of Kuipers and many present their own account The present book also contains a synopsis of *Structures in Science* It can be read independently of the first volume of *Essays in Debate with Theo Kuipers* which is devoted to Kuipers *From Instrumentalism to Constructive Realism* 2000 *Cognitive Structures in Scientific Inquiry* Roberto Festa, Atocha Aliseda, Adriana Johanna Maria Peijnenburg, 2005 This book is the first of two volumes devoted to the work of Theo Kuipers a leading Dutch philosopher of science Philosophers and scientists from all over the world thirty seven in all comment on Kuipers philosophy and each of their commentaries is followed by a reply from Kuipers The present volume focuses on Kuipers views on confirmation empirical progress and truth approximation as laid down in his *From Instrumentalism to Constructive Realism* Kluwer 2000 In this book Kuipers offered a synthesis of Carnap s and Hempel s confirmation theory on the one hand and Popper s theory of truth approximation on the other The key element of this synthesis is a sophisticated methodology which enables the evaluation of theories in terms of their problems and successes even if the theories are already falsified and which also fits well with the claim that one theory is closer to the truth than another Ilkka Niiniluoto Patrick Maher John Welch Gerhard Schurz Igor Douven Bert Hamminga David Miller Johan van Benthem Sjoerd Zwart Thomas Mormann Jes s Zamora Bonilla Isabella Burger andamp Johannes Heidema Joke Meheus Hans Mooij and Diderik Batens comment on these ideas of Kuipers and many present their own account The present book also contains a synopsis of *From Instrumentalism to Constructive Realism* It can be read independently of the second volume of *Essays in Debate with Theo Kuipers* which is devoted to Kuipers *Structures in Science* 2001 *The Oxford companion to philosophy* Ted Honderich, 1995 Entries on philosophers schools of thought subjects theories debates concepts practical issues *Reductionism in the Philosophy of Science* Christian Sachse, 2007 In contemporary philosophy of science ontological reductionism or the claim that everything that exists in the world is something physical is the consensus mainstream position Contrary to a widespread belief this book establishes that ontological and epistemological reductionism stand or fall together The author proposes a new strategy of conservative theory reduction that operates by means of the construction of functional sub concepts that are coextensional with physical concepts Thus a complete conservative reductionism is established that vindicates both the indispensable

scientific character of the special sciences and their reducibility to physics The second part of the book works this strategy out using the example of classical and molecular genetics

**Miracles: An Exercise in Comparative Philosophy of Religion** Karen R. Zwier, David L. Weddle, Timothy D. Knepper, 2022-11-03 This volume provides a comparative philosophical investigation into a particular concept from a variety of angles in this case the concept of miracle The text covers deeply philosophical questions around the miracle with a multiplicity of answers Each chapter brings its own focus to this multifaceted effort The volume rejects the primarily western focus that typically dominates philosophy of religion and is filled with particular examples of miracle narratives community responses and polemical scenarios across widely varying religious contexts and historical periods Some of these examples defy religious categorization and some papers challenge the applicability of the concept miracle which is of western and monotheistic origin By examining miracles thru a wide comparative context this text presents a range of descriptive content and analysis with attention to the audience to the subjective experiences being communicated and to the flavor of the narratives that come to surround miracles This book appeals to students and researchers working in philosophy of religion and science as well those in comparative religion It represents in written form some of the perspectives and dialogue achieved in The Comparison Project's 2017-2019 lecture series on miracles The Comparison Project is an enterprise in comparing a variety of religious voices allowing them to stand in dialogue

**Double Helix Methodology in Think Tanks** Jiaofeng Pan, 2026-02-15 This book unprecedentedly and systematically puts forward the double helix methodology in think tanks which is used to explore and answer the questions regarding the pathways and methods to realize the transitions from empirical to scientific research from discrete to systematic approaches from random to normative practices from academic to academic practical purposes from static to steady state analysis and from mono disciplinary to interdisciplinary research The methodology analyzes the evolution trend of research methods in domestic and foreign think tanks and develops the four layer model of the double helix methodology in think tanks Revolving the ten key issues of the double helix methodology in think tanks the book develops the theoretical foundation and methodological guidance for accelerating the formation and development of the discipline of think tank science and engineering and for promoting the professional scientific and disciplinary construction of think tanks
