**Programming for Design** Edith Cherry, 1998-11-10 Quickly master architectural programming concepts skills and techniques In the essential discipline of architectural programming the ideas of philosophy sociology anthropology psychology and history find their focus in the realities of site conditions budgets and functionality Author Edith Cherry vividly demonstrates in this inspiring tutorial that the programming process not only helps architects avoid the endless design revisions occurring in most projects but that it is also the key to designing for optimal form and function Programming for Design lets you rapidly acquire the knowledge and skills needed to successfully program a moderate size space Rather than simply describe basic principles and practices this straightforward guide helps you master architectural programming by actually doing it Professor Cherry identifies the central issues involved and describes the skills needed to work with clients to identify problems to be solved by a design effort Emphasizing designing for people she offers proven strategies and techniques for goal setting information gathering and analysis concept development program synthesis and communicating with clients The book is also devoted to practical applications The author walks you step by step through a project of your own choosing providing numerous examples and four case studies within each step that vividly illustrate how to effectively gather process and communicate information Programming for Design features more than 200 supporting illustrations diagrams and sidebars appearing throughout the text reproducing pithy sayings by such far flung figures as Plato and Yogi Berra Einstein and Lao Tzu that help relate the programming process to other disciplines [An Architecture of Place](#) Randall S. Lindstrom, 2024-06-25 Challenging mainstream architecture s understandings of place this book offers an

illuminating clarification that allows the idea's centrality in all aspects of everyday design thinking to be rediscovered or considered for the first time. Rigorous but not dense, practical but not trivialising, the book unfolds on three fronts. First it clearly frames the pertinent aspects of topology, the philosophy of place, importantly differentiating two concepts that architecture regularly conflates: place and space. Second, it rejects the ubiquitous notion that architecture makes place and instead reasons that place is what makes architecture and the built environment possible; that place calls for and to architecture and that architecture is thus invited to listen and respond. Finally, it turns to the matter of designing responses that result not just in more places of architecture demanding little of design, nor merely in architecture with some sense of place demanding little more, but rising above those responses that constitute an architecture of place demanding the greatest vigilance but offering the utmost freedom. Opening up a term regarded as so common that its meaning is seldom considered, the author reveals the actual depth and richness of place, its innateness to architecture and its essentiality to practitioners, clients, educators, and students, including those in all spatial disciplines.

Building Performance Evaluation Wolfgang F.E. Preiser, Andrea E. Hardy, Ulrich Schramm, 2017-08-30. The main aim of this book is to present an intriguing retrospective of Building Performance Evaluation (BPE) as it evolved from Post Occupancy Evaluation (POE) over the past 25 years. On one hand, this is done by updating original authors' chapter content of Building Evaluation, the first edition published in 1989. That in turn is augmented by an orientation toward current and future practice, on the other, including new authors who are engaged in ongoing cutting edge projects. Therefore, individual methodology oriented chapters covering the fundamental principles of POE and BPE go along with major thematic chapters, topics of which like sustainability or integration of new technologies are addressed in a diversity of case studies from around the globe. Research methodologies and framework of POEs continue to evolve. POEs are one step on the larger scale of BPE in understanding how buildings function after they are occupied. This resource helps architects, building owners, and facility managers understand the implications and reactions to the facilities that they designed, built, and/or commissioned. By considering the whole process from conception to future uses of the building, there can be a more holistic approach to the planning, programming, design, construction, occupancy, and future adaptability of the structure. This book is dedicated to first editor Wolfgang F. E. Preiser, who passed away during the process of editing and reviewing chapters of this volume.

*How Architects Write* Tom Spector, Rebecca Damron, 2017-05-18. *How Architects Write* shows you the interdependence of writing and design in both student and professional examples.
