Faure,Michael Faure,Gunter Heine,Gand Heine,Günter Heine,2005-01-01 This provides not only a summary of the criminal prosecution of environmental law in the various countries but also addresses differences and similarities in practice with respect to environmental criminal law A critical analysis of the answers is also provided Jacket **Problems in transfrontier pollution** ,1974-01-01 Problems in Transfrontier Pollution ,1974 Senate Resolution 49 United States. Congress. Senate. Committee on Foreign Relations. Subcommittee on Arms Control, Oceans, and International Environment,1978 **Economics of the Environment** Horst Siebert,2013-11-27 The Illbor of nature is paid not because she does little In proportion as she becomes niggardly in her gifts she exacts a greater price for her work Where she is munificently benefi cient she always works gratis David Ricardo This book interprets nature and the environment as a scarce resource Whereas in the past people lived in a paradise of environmental superabundance at

present environmental goods and services are no longer in ample supply The environment fulfills many functions for the economy it serves as a public consumption good as a provider of natural resources and as receptacle of wastes These different functions compete with each other Releasing more pollutants into the environment reduces environmental quality and a better environmental quality implies that the environment's use as a receptacle of wastes has to be restrained Consequently environmental disruption and environmental use are by nature allocation problems This is the basic message of this book If a resource is scarce and if a zero price is charged for its use then misallocation will result The environment as a receptacle of wastes is heavily over used and consequently environmental quality declines Scarcity requires a price This book analyzes how this price should be set whether a correct price can be established through the market mechanism and what role the government should play The book offers a theoretical study of the allocation problem and describes different policy approaches to the environmental problem
