Problems Involving Change Of Type:

Fracture and Damage in Quasibrittle Structures Z.P. Bazant, Z. Bittnar, M. Jirasek, J. Mazars, 2004-01-14 Understanding of failure of quasibrittle materials is of paramount importance in many engineering fields. This subject has become a broad and important field of considerable mathematical complexity with many competing models and unsolved problems. Attention in this volume focuses on concrete, rock, masonry, toughened ceramics, ice, and other quasibrittle materials characterized by the development of large zones of cracking or other microstructural damage and its localization into major fractures. **Viscous Profiles and Numerical Methods for Shock Waves** Michael Shearer, 1991-01-01 One strongly represented theme is the power of ideas from dynamical systems that are being adapted and developed in the context of shock waves. *Shock Induced Transitions and Phase Structures in General Media* J.E. Dunn, Roger Fosdick, Marshall Slemrod, 2012-12-06 This IMA Volume in Mathematics and its Applications SHOCK INDUCED TRANSITIONS AND PHASE STRUCTURES IN GENERAL MEDIA is based on the proceedings of a workshop that was an integral part of the 1990-91 IMA program on Phase Transitions and Free Boundaries. The workshop focused on the thermodynamics and mechanics of dynamic phase transitions that are mainly inertially driven and brought together physicists, metallurgists, mathematicians, engineers, and molecular dynamicists with interests in these problems. Financial support of the National Science Foundation made the meeting possible. We are grateful to J. E. Dunn, Roger Fosdick, and Marshall Slemrod for organizing the meeting and editing the proceedings. *Vner Friedman Willard Miller Jr. PREFACE* When a body is subjected to a strong shock, the material may suffer severe local structural changes. Rapid solidification, liquification, or vaporization can occur, and moreover, complex structural heterogeneity is often left in the wake of the passing wave. Thus, inertially driven shock waves raise fundamental questions involving experiment, theory, and mathematics, which bear on phase stability and metastability, as well as on reaction kinetics and appropriate measures of phase structure. **Modeling and Analysis of Diffusive and Advective Processes in Geosciences** William Edward Fitzgibbon, Mary Fanett Wheeler, 1992-01-01 Not a collection of proceedings but 11 papers on topics that emerged from a September 1989 conference in Houston on mathematical and computational issues in geophysical fluid and solid mechanics. The discussions include a semi-linear heat equation subject to the specification of energy as an analytic. *Mathematics Curriculum in School Education* Yeping Li, Glenda Lappan, 2013-11-19 Mathematics curriculum, which is often a focus in education reforms, has not received extensive research attention until recently. Ongoing mathematics curriculum changes in many education systems call for further research and sharing of effective curriculum policies and practices that can help lead to the improvement of school education. This book provides a unique international perspective on diverse curriculum issues and practices in different education systems, offering a comprehensive picture of various stages along curriculum transformation from the intended to the achieved, and showing how curriculum changes in various stages contribute to mathematics teaching and learning in different educational systems and cultural contexts. The book is organized

to help readers learn not only from reading individual chapters but also from reading across chapters and sections to explore broader themes including Identifying what is important in mathematics for teaching and learning in different education systems Understanding mathematics curriculum and its changes that are valued over time in different education systems Identifying and analyzing effective curriculum practices Probing effective infrastructure for curriculum development and implementation Mathematics Curriculum in School Education brings new insights into curriculum policies and practices to the international community of mathematics education with 29 chapters and four section prefaces contributed by 56 scholars from 14 different education systems This rich collection is indispensable reading for mathematics educators researchers curriculum developers and graduate students interested in learning about recent curriculum development research and practices in different education systems It will help readers to reflect on curriculum policies and practices in their own education systems and also inspire them to identify and further explore new areas of curriculum research for improving mathematics teaching and learning
