formulation of oral dosage forms with controlled drug release The drug is dispersed in a polymeric matrix either biodegradable or not the basis of which is the transfer of the liquid and the drug through dosage form Information on this diffusion is found either through mathematical treatment when the problem is simple or through numerical analysis for more complex problems Professor Vergnaud demonstrates and clarifies these modelling the process of drug delivery by using numerical analysis and computerization A simulation of the process is provided together with a determination of the effects of all parameters and the author uses both mathematical and numerical models to predict the preparation of new dosage forms able to fulfil specific conditions
