Handbook of Mathematics for Engineers and Scientists Andrei D. Polyaniin,Alexander V. Manzhairov,2006-11-27 Covering the main fields of mathematics this handbook focuses on the methods used for obtaining solutions of various classes of mathematical equations that underlie the mathematical modeling of numerous phenomena and processes in science and technology The authors describe formulas methods equations and solutions that are frequently used in scientific and engineering applications and present classical as well as newer solution methods for various mathematical equations The book supplies numerous examples graphs figures and diagrams and contains many results in tabular form including finite sums and series and exact solutions of differential integral and functional equations

CGAL Arrangements and Their Applications Efi Fogel,Dan Halperin,Ron Wein,2012-01-05 Arrangements of curves constitute fundamental structures that have been intensively studied in computational geometry Arrangements have numerous applications in a wide range of areas examples include geographic information systems robot motion planning statistics computer assisted surgery and molecular biology Implementing robust algorithms for arrangements is a notoriously difficult task and the CGAL arrangements package is the first robust comprehensive generic and efficient implementation of data structures and algorithms for arrangements of curves This book is about how to use CGAL two dimensional arrangements to solve problems The authors first demonstrate the features of the arrangement package and related packages using small example programs They then describe applications i e complete standalone programs written on top of CGAL arrangements used to solve meaningful problems for example finding the minimum area triangle defined by a set of points planning the motion of a polygon translating among polygons in the plane computing the offset polygon finding the largest common point sets under approximate congruence constructing the farthest point Voronoi diagram coordinating the motion of two discs moving among obstacles in the plane and performing Boolean operations on curved polygons The book contains comprehensive explanations of the solution programs many illustrations and detailed notes on further reading and it is supported by a website that contains downloadable software and exercises It will be suitable for graduate students and researchers involved in applied research in computational geometry and for professionals who require worked out solutions to real life geometric problems It is assumed that the reader is familiar with the C programming language and with the basics of the generic programming paradigm
