Disciplines as Frameworks for Student Learning Tim Riordan, James Roth, 2023-07-03 What should students be able to do and how should they be able to think as a result of study in a discipline What does learning in the disciplines look like at different developmental levels How does one go about designing such learning and assessment in the disciplines What institutional structures and processes can assist faculty to engage and teach their disciplines as frameworks for student learning Creating ways to make a discipline come alive for those who are not experts even for students who may not take more than one or two courses in the disciplines they study requires rigorous thought about what really matters in a field and how to engage students in the practice of it Faculty from Alverno College representing a range of liberal arts disciplines chemistry economics history literature mathematics and philosophy here reflect on what it has meant for them to approach their disciplines as frameworks for student learning They present the intellectual biographies of their explorations the insights they have gained and examples of the practices they have adopted The authors all demonstrate how the ways of thinking they have identified as significant for their students in their respective disciplines have affected the way they design

learning experiences and assessments They show how they have shaped their teaching around the ways of thinking they want their students to develop within and across their disciplines and what that means in terms of designing assessments that require students to demonstrate their thinking and understanding through application and use This book will appeal to faculty interested in going beyond mere techniques to a more substantive analysis of how their view of their respective disciplines might change when seen through the lens of student learning It will also serve the needs of graduate students trainers of Tas and anyone engaged in faculty development or interested in the scholarship of teaching

Spectroscopy and Modeling of Biomolecular Building Blocks Jean-Pierre Schermann, 2007-10-16 Spectroscopy and Modeling of Biomolecular Building Blocks presents an overview of recent advances in the intertwining of the following research fields photon and electron spectroscopy quantum chemistry modelling and mass spectrometry The coupling of these disciplines offers a new point of view to the understanding of isolated elementary building blocks of biomolecules and their assemblies It allows the unambiguous separation between intrinsic properties of biomolecular systems and those induced by the presence of their environment The first chapters provide background in modelling I frequency resolved spectroscopy using microwave infrared and UV photons time resolved spectroscopy in the femtosecond domain and energy resolved electron spectroscopy II and production of gas phase neutral and ionic biomolecular species mass spectrometry ion mobility and BIRD techniques III Chapter IV is devoted to case studies of gas phase experimental investigations coupled to quantum or classical calculations The topics are structural studies of nucleobases and oligonucleotides peptides and proteins sugars neuromolecules non covalent complexes chiral systems interactions of low energy electrons with biomolecules in the radiation chemistry context and very large gas phase biomolecular systems The fifth chapter concerns the link between gas phase and liquid phase Different treatments of solvation are illustrated through examples pointing out the influence of progressive addition of water molecules upon properties of nucleobases peptides sugars and neuromolecules Offer a new perspective to the understanding of isolated elementary building blocks of bio molecules Includes case studies of experimental investigations coupled to quantum or classical calculations
