Presentation In A Week:

Reclaiming Opportunities for Effective Teaching Mary Ellen Dunn, 2016-01-07 This book examines the increased standardization and management of community college course outlines in Ontario and the associated decline in the ability of college professors to effectively educate their students Dunn tracks the changes of increased pressure from corporations to privatize public services and make them for profit friendly Interviews of program faculty who have recently been forced to use course outlines for the first time along with critical analyses of a sample course outline and a series of union related texts illuminate the issue Dunn attributes the shift of power in community colleges to various factors which include the ideological work college employees do to support global finance capital the managerial labor which establishes a course outline the textual duties that faculty members facilitate to set up their own ruling and the performance work that faculty members do to execute the textual rules of their prescriptive course outline work In order to rectify the harmful effects of the new standardized and supervised curriculum Dunn identifies areas where effective teaching and learning can be reclaimed

Six Sigma and Beyond D.H. Stamatis, 2002-11-12 The final volume of this series presents a synopsis of the curriculum that a typical Six Sigma program should follow It differs from the preceding six volumes in that it is an implementation volume therefore the information is geared towards helping readers formalize their own training The book establishes the minimum requirements for the Six Si

Modelling the Human Body Exposure to ELF Electric Fields Cristina Peratta, Andres Peratta, 2010 The objective of this book is to describe techniques to investigate the behaviour of electric fields and induced currents in the human body exposed to different scenarios of extremely low frequency ELF high voltage low current electromagnetic fields by means of numerical modelling with improved Boundary Element Methods BEM A variety of three dimensional anatomically shaped human body models under different exposure conditions are presented and solved The mathematical formulation for the case of human exposure to ELF electromagnetic fields departing from Maxwell equations and for the electrical properties of biological tissue is provided The underpinning ideas of the Boundary Element Method applied to ELF fields in the human body are presented A literature survey including electrical properties of tissues relevant to low frequency calculations has been compiled and included in one chapter A novel improved BEM approach is introduced in order to solve this type of problems leading to more accurate results and more efficient calculations The developed methodology is applied to three different case studies i overhead power transmission lines ii power substation rooms and iii pregnant woman including foetus and evolving scenarios In all the cases a sensitivity analysis investigating the influence of varying geometrical and electrical properties of the tissues has been conducted The results obtained allow to identify situations of high and low exposure in the different parts of the body and to compare with existing exposure guidelines
