Report of the Miller Center Commission on the Presidency and Science Advising Miller Center Commission on the Presidency and Science Advising, 1989-01 The commission consisting of nine highly placed public officials scientists educators science advisers and science writers looked at science advising as a presidential question rather than one of science policy The core proposition of this report is that the president needs a strong system of science advising which includes a skilled chief science adviser assisted by well qualified staff and with ready access to nongovernmental sources of advice and knowledge Furthermore the commission recommends that a new president consider a spectrum of possible roles for this very flexible staff position and select the roles that best satisfy his needs rather than accept a particular historical model of science advice A major responsibility of a science adviser is to give the president access to the expertise he needs from the science and engineering community inside and outside government Co published with the Miller Center of Public Affairs

Governing the White House Charles Eliot Walcott,Karen Marie Hult,1995 Charles Walcott and Karen Hult maintain that the organization of the White House influences presidential performance much more than commonly thought and that organization theory is an essential tool for understanding that influence Their book offers the first systematic application of organizational governance theory to the structures and operations of the White House Office Using organizational theory to analyze what at times has been a rather ad hoc and disorganized office might seem quixotic After all the White House Office exists within a turbulent political environment that encourages expedient decision making And every four to eight years it must be reinvented by presidents who have their own theories and preferences about how to organize a staff to serve their policy needs But Walcott and Hult argue that White House staffs are not simply puppets of presidential preference and style Yes staff structures evolve primarily from presidents strategic responses to external demands But those structures in turn significantly influence how the executive branch perceives and responds to further demands The first part of their book lays out the theoretical argument The second examines White House outreach congressional liaison press relations personnel selection executive branch oversight and interest group and intergovernmental liaison The third focuses on White House

handling of policy development and implementation The fourth analyzes staff structures that facilitate the operation of the presidency itself presidential writing and scheduling staff management and cabinet coordination The book concludes by identifying general patterns in the emergency nature and stability of governance structures in the White House Original and instructive *Governing the White House* provides a much needed primer on the inner workings of the White House staff and will be an essential volume for anyone studying the presidency

Cardinal Choices, 2000-09 This book is a history of the complex relations between scientific advisors primarily physicists and U S presidents in their role as decision makers about nuclear weapons and military strategy The story unsurprisingly is one of considerable tension between the experts and the politicians as scientists seek to influence policy and presidents alternate between accepting their advice and resisting or even ignoring it First published in 1992 the book has been brought up to date to include the experiences of science advisors to President Clinton In addition the texts of eleven crucial documents from the Einstein Szilard letter to President Roosevelt 1939 to the announcement of the Strategic Defense Initiative by President Reagan 1983 have been added as appendixes

Thompson, 1986 With this fifth volume in the series on the presidency and science advising the Miller Center continues its inquiry into a crucial and neglected topic in presidential studies All the contributors to this volume dwell on the opportunities as well as the problems of science advising Science advising is seen as more difficult to organize and implement than economic or national security advising although the several authorities offer different explanations Contributors to this volume include D Allen Bromley Jack Ruina Richard Garwin Edward Teller and Harvey Brooks Co published with the Miller Center of Public Affairs
