Qualitative Research in European Migration Studies Ricard Zapata-Barrero, Evren Yalaz, 2018-06-19 This open access book covers the main issues, challenges and techniques concerning the application of qualitative methodologies to the study of migration. It discusses theoretical, epistemological and empirical questions that must be considered before, during and after undertaking qualitative research in migration studies. It also covers recent innovative developments and addresses the key issues and major challenges that qualitative migration research may face at different stages, i.e. crafting the research questions, defining approaches, developing concepts and theoretical frameworks, mapping categories, selecting cases, dealing with concerns of self-reflection, collecting and processing empirical evidence through various techniques including visual data, dealing with ethical issues and developing policy research dialogues. Each chapter discusses relative strengths and limitations of qualitative research. The chapters also identify the main drivers for qualitative research development in migration studies. It is a unique volume as it brings together a multidisciplinary perspective as well as illustrations of different issues derived from the research experience of the recognized authors. One additional value of this book is its geographic focus on Europe. It seeks to explore theoretical and methodological issues that are raised by distinctive features of the European context. This volume will be a useful reference source for scholars and professionals in migration studies and in social sciences as well. The publication is also addressed to graduate and post-graduate students and more generally to those who embark on the task of doing qualitative research for the first time in the field of migration.

Environment, Society and Natural Resource Management Geoffrey Lawrence, Vaughan Higgins, Stewart Lockie, 2001

As greater significance is placed on the relationship between people and their environment, it is increasingly acknowledged that few environmental problems can be solved without considering the social context in which they arise. But what does it mean to incorporate the social and what types of social sciences are needed? This incisive book critically reviews the theoretical perspectives that underlie social scientific contributions to natural resource management and argues for both a greater social science presence and for conceptual and methodological clarity within the social sciences themselves. The expert contributors explore how new concepts and approaches can contribute positively to natural resource management. They demonstrate how the social sciences can be used as a vehicle to highlight social concerns as well as to foster greater participation, co-operation and integration among community members, natural resource managers and researchers. Through detailed case studies from Australasia and the Americas, the authors illustrate how different social science perspectives can be utilised. The range and variety of views provide a basis for the evaluation of various and often competing disciplinary paradigms within the social sciences. This book will undoubtedly contribute to a more sophisticated debate about the place of

the social in environmental research It will prove to be of great worth to students and researchers of environmental and social issues to those involved in environmental decision making and community planning as well as environmental policymakers and natural resource managers
