complete **Materials Processing in High Gravity** Liya L. Regel, William R. Wilcox, 2012-12-06 There are two motives for studying materials processing in centrifuges First such research improves our understanding of the influence of acceleration and convection on materials processing Second there are commercial opportunities for production of unique and improved materials that cannot be prepared under normal earth conditions or in space Through a combination of experiments and theory we are gaining an understanding of centrifugation on phenomena of importance to materials processing We find that it is necessary to consider not only acceleration but also the Coriolis effect and the variation of acceleration with position As one consequence the vigor of buoyancy driven convection is sometimes increased by centrifugation and sometimes decreased Similarly the tendency of the convection to become unstable or oscillatory may either be increased or decreased by centrifugation On the other hand the observed effects of centrifugation on product quality have largely gone unexplained This volume constitutes the proceedings of The Second International Workshop on Materials Processing at High Gravity hosted by Clarkson University in June of 1993 The concept for a workshop on materials processing in centrifuges was born at a series of informal meetings held in Paris in 1990 The First International Workshop on Materials Processing at High Gravity was held in May of 1991 in Dubna USSR on the banks of the Volga River The proceedings of this workshop was published in 1992 as a special issue of the Journal of Crystal Growth

Innovations in Materials Processing Gordon Bruggeman, Volker Weiss, 2012-12-06 The Army Materials and Mechanics Research Center in cooperation with the Office of Sponsored Programs of Syracuse University has been conducting the Annual Sagamore Army Materials Research Conferences since 1954 The specific purpose of these conferences has been to bring together scientists and engineers from academic institutions industry and government to explore in depth a subject of importance to the Department of Defense the Army and the scientific community This 30th Sagamore Conference entitled Innovations in Materials Processing has attempted to focus on the interdisciplinary nature of materials processing looking at recent advancements in the development of unit processes from a range of standpoints from the understanding and control of the underlying mechanisms through their application as part of a manufacturing sequence In between the classic link between processing and materials properties is firmly established A broad range of materials are treated in this manner metals ceramics plastics and composites The interdisciplinary nature of materials processing exists through its involvement with the basic sciences with process and product design with process control and ultimately with manufacturing engineering Materials processing is interdisciplinary in another sense through its application within all materials disciplines The industrial community and the Army as its customer is becoming increasingly concerned with producibility reliability affordability issues in advanced product development These concerns will be adequately addressed only by employing the full range of disciplines encompassed within the field of materials processing
