Query Processing for Advanced Database Systems Johann Christoph Freytag, David Maier, Gottfried Vossen, 1994 The chapters of this book provide an excellent snapshot of current research and development activities in the area of query processing and optimization They supply potential answers to many questions that have been raised for new types of database systems and at the same time reflect the variety of the different approaches taken The book acts both as a reference for the state of the art in query processing for the next generation of database systems and as a good starting point for anybody interested in understanding the challenging questions in the area Furthermore the book will help the reader to gain an in depth understanding of why efficient query processing is needed for future database systems

Query Processing in Database Systems W. Kim, D.S. Reiner, Don Batory, 2012-12-06 This book is an anthology of the results of research and development in database query processing during the past decade The relational model of data provided tremendous impetus for research into query processing Since a relational query does not specify access paths to the stored data the database management system DBMS must provide an intelligent query processing subsystem which will evaluate a number of potentially efficient strategies for processing the query and select the one that optimizes a given performance measure The degree of sophistication of this subsystem often called the optimizer critically affects the performance of the DBMS Research into query processing thus started has taken off in several directions during the past decade The emergence of research into distributed databases has enormously complicated the tasks of the optimizer In a distributed environment the database may be partitioned into horizontal or vertical fragments of relations Replicas of the fragments may be stored in different sites of a network and even migrate to other sites The measure of performance of a query in a distributed system must include the communication cost between sites To minimize communication costs for queries involving multiple relations across multiple sites optimizers may also have to consider semi join techniques
