## **Moduli Spaces Of Curves Mapping Class Groups And Field Theory:**

**Moduli Spaces of Curves, Mapping Class Groups and Field Theory** Xavier Buff, 2003 It concludes with a study of the canonical Galois action on the fundamental groupoids computed using Grothendieck Teichmüller theory Finally Chapter 3 studies strict ribbon categories which are closely related to braided tensor categories here they are used to construct invariants of 3 manifolds which in turn give rise to quantum field theories **BOOK JACKET** *Mapping Class Groups and Moduli Spaces of Riemann Surfaces* Carl-Friedrich Bödigheimer, Richard Martin Hain, 1993 The study of mapping class groups and moduli spaces of compact Riemann surfaces is currently a central topic in topology algebraic geometry and conformal field theory This book contains proceedings from two workshops held in the summer of 1991 one at the University of Göttingen and the other at the University of Washington at Seattle The papers gathered here represent diverse approaches and contain several important new results With both research and survey articles the book appeals to mathematicians and physicists

**Topology, Geometry And Field Theory - Proceedings Of The 31st International Taniguchi Symposium And Proceedings Of The Conference** Kenji Fukaya, Dieter Kotschick, M Furuta, Toshitake Kohno, 1994-08-31 Nobel Symposium 129 on Neutrino Physics was held at Haga Slott in Enköping Sweden during August 19-24 2004 Invited to the symposium were around 40 globally leading researchers in the field of neutrino physics both experimental and theoretical The dominant theme of the lectures was neutrino oscillations which after several years were recently verified by results from the Super Kamiokande detector in Kamioka Japan and the SNO detector in Sudbury Canada Discussion focused especially on effects of neutrino oscillations derived from the presence of matter and the fact that three different neutrinos exist Since neutrino oscillations imply that neutrinos have mass this is the first experimental observation that fundamentally deviates from the standard model of particle physics This is a challenge to both theoretical and experimental physics The various oscillation parameters will be determined with increased precision in new specially designed experiments Theoretical physics is working intensively to insert the knowledge that neutrinos have mass into the theoretical models that describe particle physics The lectures provided a very good description of the intensive situation in the field right now The topics discussed also included mass models for neutrinos neutrinos in extra dimensions as well as the seesaw mechanism which provides a good description of why neutrino masses are so small This book is A4 size and in full color

**Algebraic Geometry Santa Cruz 1995** János Kollár, David R. Morrison, 1997 *Combinatorial Optimization* Bruno Simeone, 2006-11-14 The C I M E Summer School at Como in 1986 was the first in that series on the subject of combinatorial optimization Situated between combinatorics computer science and operations research the subject draws on a variety of mathematical methods to deal with problems motivated by real life applications Recent research has focussed on the connections to theoretical computer science in particular to computational complexity and algorithmic issues The Summer School's activity centered on the 4 main lecture courses the notes of which are included in this volume

Moonshine beyond the Monster Terry Gannon, 2023-07-27 A monograph on Moonshine a mathematical physics topic for graduate students and researchers

*Homotopy Theory via Algebraic Geometry and Group Representations* Mark E. Mahowald, 1998 The academic year 1996-97 was designated as a special year in Algebraic Topology at Northwestern University Evanston IL In addition to guest lecturers and special courses an international conference was held entitled Current trends in algebraic topology with applications to algebraic geometry and physics The series of plenary lectures included in this volume indicate the great breadth of the conference and the lively interaction that took place among various areas of mathematics Original research papers were submitted and all submissions were refereed to the usual journal standards

*Relativistic Fluid Dynamics* Angelo M. Anile, Yvonne Choquet-Bruhat, 2006-11-14 In recent years the subject of relativistic fluid dynamics has found substantial applications in astrophysics and cosmology theories of gravitational collapse models of neutron stars galaxy formation as well as in plasma physics relativistic fluids have been considered as models for relativistic particle beams and nuclear physics relativistic fluids are currently used in the analysis of the heavy ion reactions Modern methods of analysis and differential geometry have now also been introduced The International C I M E Course brought together expertise and interest from several areas astrophysics plasma physics nuclear physics mathematical methods to create an appropriate arena for discussion and exchange of ideas The main lecture courses introduced the most significant aspects of the subject and were delivered by leading specialists The notes of these have been written up for this volume and constitute an up to date and thorough treatment of these topics Several contributions from the seminars on specialized topics of complementary interest to the courses are also included

**Higher Homotopy Structures in Topology and Mathematical Physics** James D. Stasheff, John McCleary, 1999 Since the work of Stasheff and Sugawara in the 1960s on recognition of loop space structures on H spaces the notion of higher homotopies has grown to be a fundamental organizing principle in homotopy theory differential graded homological algebra and even mathematical physics This book presents the proceedings from a conference held on the occasion of Stasheff's 60th birthday at Vassar in June 1996 It offers a collection of very high quality papers and includes some fundamental essays on topics that open new areas
