

which the author sets forth in a rather positive way that modern psychology does not accept the existence of instincts. He then proceeds to describe some "fundamental physiological drives" and in this chapter which deals with the motivation of human behavior, he links human behavior, including social motives, sexual motives, the conformative motive, the need for security, etc., to these fundamental physiological drives and organic conditions. It is hard to see how this differs from what most of us understand by instinctual drives. One statistic on page 288 is no doubt a typographical error. The six psychoses listed certainly account for far more than fifteen percent of all hospitalized mentally ill.

Although there is a mild doubt in this reviewer's mind as to whether it ought to be in a book of this sort, Chapter 2, entitled "The Psychology of Efficiency," is a remarkably fine "how to do it" chapter. Something like this ought to be incorporated in every curriculum, from Junior High through Graduate School. It would save many students many painful hours of inefficient study.

The book is handsomely bound, beautifully printed, and ought to be well received in nursing schools, hospitals, and libraries. This is one of the McGraw-Hill Series of nursing texts edited by Miss Lucile Petry, who has written a short but thoughtful Foreword.

MENTAL HYGIENE IN PUBLIC HEALTH. SECOND EDITION. By Paul V. Lemkau, M. D. (New York: McGraw-Hill, 1955. Price: \$8.00.)

The second edition of *Mental Hygiene in Public Health* is interesting and informative, bringing up to date recent data and points of view of both the fields in which Doctor Lemkau is eminently capable of speaking with authority.

This able psychiatrist, Professor of Public Health at Johns Hopkins University, is at present on leave in order to direct the Mental Health Services of the newly formed New York City-Community Mental Health Board. He will coordinate the services of the health organizations, schools, churches, welfare, and law enforcement agencies, helping the members of the team to understand each other's problems so that they may work together harmoniously toward better health for the individual and the community.

The book is well planned, covering in Part I the place of mental hygiene in public health, and in Part II the development of the individual, with a full discussion of eugenics, the prenatal period, preschool, school, adolescent, young adult, and mature years, through old age.

Each chapter is followed by a clear-cut summary and numerous well-chosen references. These together with the full subject index make this book not only enjoyable and stimulating reading, but a valuable reference book that should be in every medical library.

An Appendix views briefly the symptoms of various psychiatric illnesses and emotional dis-

turbances, following in general the classification in the revised nomenclature issued by The American Psychiatric Association in 1952. The reading list includes psychiatric texts currently used.

A section on Visual Aids recommends motion pictures for use in illustrating various concepts of psychopathological conditions, including the sources from which films may be obtained.

From broad fields of experience, Doctor Lemkau writes with depth of knowledge and understanding. Himself an eclectic, he evaluates wisely the contributions of the different schools of psychiatry, pointing out where various methods may be used most effectively. His presentation of the integration of mental hygiene in public health is a forward-looking program of comprehensive medicine for individual and community.

In the author's belief: "Health must be defined to include something more than a sound body; it must be in terms of a healthful person, with his body sound and capable of full use in living an intellectually satisfying and emotionally stable life.

"Where the health of the population is concerned every piece of useful information, regardless of origin or techniques of collection, should be exploited to the fullest possible extent. The mental hygienist, particularly becomes an arch combiner of specialties, for he must include in his survey not only the total person but also his environment, distant and close at hand, including the personalities that are effective in the environment."

PSYCHOPATHOLOGY AND EDUCATION OF THE BRAIN-INJURED CHILD. VOLUME II. By Alfred A. Strauss and Newell C. Kephart. (New York and London: Grune & Stratton, 1955. Price: \$6.00.)

The medical profession has long needed a bridge between clinical behavior, the intellectual evaluation of defective children, and the morbid pathology of the brain-injured child. The authors in this volume have had the courage to abandon a former publication containing the basic factors in their twenty years of observation and research, and now bring before those interested in rehabilitation, training, and therapy one of the most practical and comprehensive surveys of the problem that has been developed so far.

This present volume is therefore not a revision of the first, but an entirely new structure which they have molded from the original, as well as adding more recently acquired evidence in the portrayal of considerations, tests, and evaluation of the so-called "brain-injured normal" child.

The original elaboration of "the clinical syndrome of exogeneity in brain-injured mentally defective children" has been enlarged to include the concept of "the clinical syndrome of the brain-injured child who is not mentally defective but who, in spite of 'normalcy in I.Q.' as tested is still 'defective.'"

In resolving this apparent paradox, the authors wisely select one of the most important recent concepts that has arisen to alter former dogmas of
