The Robot Kit, 1995. **Affordable Open-source Mobile Robot Kit for Education and Research** Nathan K. Wong, 2015. As technology advances, students must be adequately prepared for a robotics filled future. In the last few decades, a growing number of robots have been successfully designed for new applications. Robots are no longer seen only in advanced manufacturing and military applications, but have expanded to reach the consumer market. Development of robots such as self-driving cars, domestic chores robots, and disability assistant robots drives the need for robotics and technology in the K-12 education curriculum. Robotics projects in the classroom can be the key to science and technology literacy. Putting the components of a mobile robot into the hands of students allows them to understand how other robots around them operate. This better prepares them for understanding today's technological advances. With the interdisciplinary nature of robotics, students who play with robots can learn concepts across many different STEM fields and understand how they apply to real world problems. The hands-on projects and physical objectives that come from robotics help keep students engaged and can increase motivation to learn. A new design for a mobile robotics kit for education and research is proposed. Mechanical design, electronics component selection, and software

development methods are discussed. The result of the design effort is the CPSKit, a 3D printable Arduino-based mobile robot kit with various capabilities. The CPSKit is meant to be an improvement over existing K-12 educational robotics kits due to its versatility, accessibility, capabilities such as odometry and wireless communication, and low cost. The kit can be used at K-12 or university levels, and the 3D print design makes it accessible for students to manufacture in the classroom using today's low-cost 3D printers. Several applications and examples are demonstrated to show the capabilities of the CPSKit.
