applications can assist customer purchases and employee job performance In Essay One I apply two experiments to investigate when and how AI voicebots work or struggle in persuading customers relative to human agents In Experiment 1 I apply audio analytics to extract agents voice features i e pitch amplitude and speed and speech content i e selling adaptivity My analyses suggest two distinct routes to explain how agents speech patterns account for their performance Analyses in Experiment 2 demonstrate that relative to human agents AI bots could backfire and lead to worse performance when the customer persuasion task is more complex In my second essay I explore the coexistence of performance improvement and employee resistance to AI supervision Specifically I develop a novel two by two field experiment which randomly assigns the AI or human supervision entity and discloses the entity or not to separate the economic gain from negative reactance to AI In addition I uncover the underlying mechanism by identifying employees subjective bias to the AI feedback quality and heightened fear of job replacement once they know the supervision entity is AI rather than human managers I propose two strategies to alleviate employees resistance to AI supervision   **The Scalable Support System** Burton Vajre,2026-02-09 Your Support Isn t Broken The System Behind It Is Every growing business reaches a moment where customer support quietly becomes the bottleneck no one wants to talk about Tickets pile up Agents burn out Automation gets bolted on Customers start saying I just want to talk to a human And leadership is left staring at dashboards that look better while trust retention and loyalty slowly erode The Scalable Support System was written for that moment This is not a book about adding more tools faster replies or smarter chatbots It s a book about fixing the real problem most companies never diagnose scaling support without scaling confusion resentment and silent churn Why Most Support Automation Fails Even When the Metrics Look Good Most organizations automate customer support the same way they automate manufacturing reduce cost increase speed eliminate variability Customers don t experience it that way They experience being misunderstood Routed endlessly Handled instead of helped Processed instead of respected This book shows why those failures aren t caused by bad teams or weak technology but by flawed system design Support doesn t break because humans are inefficient It breaks when systems replace judgment instead of protecting it What This Book Gives You That Others Don t This book reframes customer support as what it truly is a decision system not a conversation system Inside you ll learn how to design support that Scales without losing empathy Automates without damaging trust Reduces volume without blocking customers Uses AI without turning your brand cold or defensive Preserves human judgment where it matters most Connects support directly to retention and lifetime value You ll discover why speed can hurt satisfaction why ticket volume is a misleading metric and why escalation isn t failure it s intelligence when done right Who This Book Is For This book is for Founders and executives scaling fast and feeling the cracks Support and CX leaders under pressure to do more with less Operations and automation professionals implementing AI responsibly Product and growth leaders who care about retention not just acquisition Any organization that wants efficiency without sacrificing humanity If your business depends on long term relationships repeat customers or
