Positive Polynomials, Convex Integral Polytopes, and a Random Walk Problem David E. Handelman, 2006-11-15

Emanating from the theory of C algebras and actions of tori theorems the problems discussed here are outgrowths of random walk problems on lattices An AGL d Z invariant which is a partially ordered commutative algebra is obtained for lattice polytopes compact convex polytopes in Euclidean space whose vertices lie in  $\mathbb{Z}^d$  and certain algebraic properties of the algebra are related to geometric properties of the polytope There are also strong connections with convex analysis Choquet theory and reflection groups This book serves as both an introduction to and a research monograph on the many interconnections between these topics that arise out of questions of the following type Let  $f$  be a Laurent polynomial in several real variables and let  $P$  be a Laurent polynomial with only positive coefficients decide under what circumstances there exists an integer  $n$  such that  $P^n f$  itself also has only positive coefficients It is intended to reach and be of interest to a general mathematical audience as well as specialists in the areas mentioned

continuous analogue of the hook walk algorithm which is well known in the combinatorics of finite Young diagrams In turn this construction provides a completely new description of the relation between the classical moment problems of Hausdorff and Markov The book is suitable for graduate students and research mathematicians interested in representation theory and combinatorics

**Grassmannians and Gauss Maps in Piecewise-Linear Topology** Norman Levitt, 1989-02-22 The book explores the possibility of extending the notions of Grassmannian and Gauss map to the PL category They are distinguished from classifying space and classifying map which are essentially homotopy theoretic notions The analogs of Grassmannian and Gauss map defined incorporate geometric and combinatorial information Principal applications involve characteristic class theory smoothing theory and the existence of immersion satisfying certain geometric criteria e g curvature conditions The book assumes knowledge of basic differential topology and bundle theory including Hirsch Gromov Phillips theory as well as the analogous theories for the PL category The work should be of interest to mathematicians concerned with geometric topology PL and PD aspects of differential geometry and the geometry of polyhedra

**Topology and Combinatorial Group Theory** Paul Latiolais, 1990 This book demonstrates the lively interaction between algebraic topology very low dimensional topology and combinatorial group theory Many of the ideas presented are still in their infancy and it is hoped that the work here will spur others to new and exciting developments Among the many techniques discussed are the
