research at the interface of logic computability theory and theoretical computer science Presents new never before published
results and provides information not easily accessible in the literature
Recursion Theory and Complexity Marat M. Arslanov, Steffen Lempp, 2014-10-10 The series is devoted to the publication of high level monographs on all areas of
mathematical logic and its applications It is addressed to advanced students and research mathematicians and may also
serve as a guide for lectures and for seminars at the graduate level
Recursion Theory Week Klaus Ambos-Spies, Gert H. Müller, Gerald E. Sacks, 2006-11-14 These proceedings contain research and survey papers from many subfields of recursion
theory with emphasis on degree theory in particular the development of frameworks for current techniques in this field Other
topics covered include computational complexity theory generalized recursion theory proof theoretic questions in recursion
theory and recursive mathematics

[Computability Theory](#) Herbert B. Enderton, 2010-12-30 *Computability Theory An Introduction to Recursion Theory*
provides a concise comprehensive and authoritative introduction to contemporary computability theory techniques and
results The basic concepts and techniques of computability theory are placed in their historical philosophical and logical
context This presentation is characterized by an unusual breadth of coverage and the inclusion of advanced topics not to be
found elsewhere in the literature at this level The text includes both the standard material for a first course in computability
and more advanced looks at degree structures forcing priority methods and determinacy The final chapter explores a variety
of computability applications to mathematics and science *Computability Theory* is an invaluable text reference and guide to
the direction of current research in the field Nowhere else will you find the techniques and results of this beautiful and basic
subject brought alive in such an approachable way Frequent historical information presented throughout More extensive
motivation for each of the topics than other texts currently available Connects with topics not included in other textbooks
such as complexity theory

Recursion Theory Joseph R. Shoenfield, 2018-04-27 This volume which ten
years ago appeared as the first in the acclaimed series *Lecture Notes in Logic* serves as an introduction to recursion theory
The fundamental concept of recursion makes the idea of computability accessible to a mathematical analysis thus forming
one of the pillars on which modern computer science rests The clarity and focus of this text have established it as a classic

instrument for teaching and self study that prepares its readers for the study of advanced monographs and the current literature on recursion theory **Computability** Nigel J. Cutland,1980 Handbook of Computability Theory E.R. Griffor,1999-10-01 The chapters of this volume all have their own level of presentation The topics have been chosen based on the active research interest associated with them Since the interest in some topics is older than that in others some presentations contain fundamental definitions and basic results while others relate very little of the elementary theory behind them and aim directly toward an exposition of advanced results Presentations of the latter sort are in some cases restricted to a short survey of recent results due to the complexity of the methods and proofs themselves Hence the variation in level of presentation from chapter to chapter only reflects the conceptual situation itself One example of this is the collective efforts to develop an acceptable theory of computation on the real numbers The last two decades has seen at least two new definitions of effective operations on the real numbers **Recursion Theory Week** Heinz-Dieter Ebbinghaus,Gert H. Müller,Gerald E. Sacks,2006-11-14 **Recursion Theory and Computational Complexity** Gabriele Lolli,1981

Recursion Theory Chi Tat Chong,Liang Yu,2015-08-17 This monograph presents recursion theory from a generalized point of view centered on the computational aspects of definability A major theme is the study of the structures of degrees arising from two key notions of reducibility the Turing degrees and the hyperdegrees using techniques and ideas from recursion theory hyperarithmetic theory and descriptive set theory The emphasis is on the interplay between recursion theory and set theory anchored on the notion of definability The monograph covers a number of fundamental results in hyperarithmetic theory as well as some recent results on the structure theory of Turing and hyperdegrees It also features a chapter on the applications of these investigations to higher randomness **Bounded Queries in Recursion Theory** William Levine,Georgia Martin,2012-12-06 One of the major concerns of theoretical computer science is the classification of problems in terms of how hard they are The natural measure of difficulty of a function is the amount of time needed to compute it as a function of the length of the input Other resources such as space have also been considered In recursion theory by contrast a function is considered to be easy to compute if there exists some algorithm that computes it We wish to classify functions that are hard i e not computable in a quantitative way We cannot use time or space since the functions are not even computable We cannot use Turing degree since this notion is not quantitative Hence we need a new notion of complexity much like time or space that is quantitative and yet in some way captures the level of difficulty such as the Turing degree of a function **Logic, Methodology and Philosophy of Science VII** R. Barcan Marcus,G.J.W. Dorn,P. Weingartner,1986-05-01 Logic Methodology and Philosophy of Science VII **Recursion Theory** Frank Robert Drake,S. S. Wainer,1980 This book is a collection of advanced research survey papers by eminent research workers in the Recursion theory *Unconventional Models of Computation* Cristian Calude,Michael J. Dinneen,F. Peper,2003-06-30 This book constitutes the refereed proceedings of the Third International Conference on Unconventional Models of Computation UMC

2002 held in Kobe Japan in October 2002 The 18 revised full papers presented together with eight invited full papers were carefully reviewed and selected from 36 submissions All major areas of unconventional computing models are covered especially quantum computing DNA computing membrane computing cellular computing and possibilities to break Turing's barrier The authors address theoretical aspects practical implementations as well as philosophical reflections

Computable Economics Kumaraswamy Velupillai, 2000 In the field of economic analysis computability in the formation of economic hypotheses is seen as the way forward In this book Professor Velupillai implements a theoretical research program along these lines Choice theory learning rational expectations equilibria the persistence of adaptive behavior arithmetical games aspects of production theory and economic dynamics are given recursion theoretic i.e. computable interpretations

Logic and Scientific Methods Maria Luisa Dalla Chiara, Kees Doets, Daniele Mundici, Johan van Benthem, 2013-06-29 This is the first of two volumes comprising the papers submitted for publication by the invited participants to the Tenth International Congress of Logic Methodology and Philosophy of Science held in Florence August 1995 The Congress was held under the auspices of the International Union of History and Philosophy of Science Division of Logic Methodology and Philosophy of Science The invited lectures published in the two volumes demonstrate much of what goes on in the fields of the Congress and give the state of the art of current research The two volumes cover the traditional subdisciplines of mathematical logic and philosophical logic as well as their interfaces with computer science linguistics and philosophy Philosophy of science is broadly represented too including general issues of natural sciences social sciences and humanities The papers in Volume One are concerned with logic mathematical logic the philosophy of logic and mathematics and computer science
