**Seeds of Destruction** Thomas Maugh,2012-12-06 There is little prospect of an immediate cure for cancer The seeds of destruction seem to be sown within all of us and there is no consensus about how these seeds develop into tumors or about what can be done to halt that development Indeed it is often difficult to find a consensus about any aspect of cancer research The sharply conflicting views of investigators in different subdisciplines has been most aptly summarized by Charles Heidelberger of the McArdle Laboratory for Cancer Research who argues that the mechanism of cancer is a mirror into which each man looks and sees himself This is true despite the fact that large infusions of money and manpower now come to the aid of cancer research In late 1974 Betty Ford and Margareta Happy Rockefeller underwent surgery for breast cancer The extensive publicity surrounding these mastectomies provoked a great deal of interest in the subject of cancer particularly breast cancer Newspaper and television stories associated with the operations gave their audiences some insight into the nature of cancer and cancer research but they provided only a glimpse of the sweeping changes that the directions of cancer research have under gone in the last few years In large part these changes simply reflect the natural progression of research but there is little question that that progression was sharply accelerated by the National Cancer Act of 1971 which initiated what politicians then termed a crusade against cancer

**Advances in Lipid Research** Rodolfo Paoletti,David Kritchevsky,2014-06-28 Advances in Lipid Research Volume 10 is a six chapter text that is devoted to several special areas of lipid research including significant progress in established areas of interest in the field The introductory chapter surveys the application of electron microscopic techniques to the analysis of plasma lipoproteins

The subsequent chapter deals with the possible modification of reticuloendothelial functions by lipids and the role of lipids in cellular humoral and immune responses. These topics are followed by discussions of the microsomal enzymes of sterol biosynthesis and the enzymatic synthesis and degradation of glycerol lipids which contain ether bonds. The remaining chapters focus on lipid neurochemistry. These chapters specifically examine particular brain lipids such as fatty acids, phospholipids, sphingolipids, galactosyl lipids, and sterols. A discussion of lipids of the entire nervous system and their variation with age is also included. This book will prove useful to lipids chemists, biochemists, and organic chemists.
