Meta Programming In Logic Programming:

Meta-Logics and Logic Programming Krzysztof Apt, Franco Turini, 2003-02-01 Investigating meta programming within the logic programming paradigm Meta Logics and Logic Programming presents original research on an important extension of logic programming that makes it more amenable for knowledge representation and programming in general The 12 contributions many written especially for this book explore the foundations language design issues and applications of meta programming in logic programming Meta programming the process of writing computer programs that can manipulate representations of other programs has been key both in the foundations of computer science and in its practical developments Examples of meta programs include compilers interpreters program analyzers and partial evaluators The choice of logic programming as a basis for meta programming offers several practical and theoretical advantages among them the possibility of tackling critical foundational problems of meta programming within a strong theoretical framework and the surprising ease of programming The usual framework of logic programming and more generally first order logic however has to be modified and extended to formally deal with meta programs extensions the editors call meta logics Along with an exploration of meta programming in logic programming the definitions formal properties and use of these extensions constitute one of the book s main themes The first part of the book Foundations focuses on the representation problem how object programs are represented within meta programs The second part Language Support for Meta Logics is concerned with language extensions that make meta programming easier and more elegant The third part Meta Logics for Knowledge Management deals with the use of meta logic for advanced knowledge representation purposes [Logic Program Synthesis and Transformation - Meta-Programming in Logic](#) Laurent Fribourg, Franco Turini, 1994-11-30 This volume constitutes the combined proceedings of the 4th International Workshops on Logic Program Synthesis and Transformation LOPSTR 94 and on Meta Programming META 94 held jointly in Pisa Italy in June 1994 This book includes thoroughly revised versions of the best papers presented at both workshops The main topics addressed by the META papers are language extensions in support of meta logic semantics of meta logic implementation of meta logic features performance of meta logic and several applicational aspects The LOPSTR papers are devoted to unfolding folding partial deduction proofs as programs inductive logic programming automated program verification specification and programming methodologies *Meta-Programming in Logic* Alberto Pettorossi, 1992 This volume contains lectures and papers delivered at Meta 92 the Third International Workshop on Metaprogramming in Logic held in Uppsala Sweden June 1992 The topics covered include foundations of metaprogramming in logic proposals for metaprogramming languages techniques for knowledge representation and belief systems and program transformation and analysis in logic Particular topics include belief revision systems intensional deduction belief systems and metaprogramming principles of partial deduction termination in logic programs semantics of the vanilla meta interpreter a complete resolution method for metaprogramming semantics of demo hierarchical

Sadri, 2003-08-02 Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker a charismatic communicator and a forceful intellectual leader The logic programming community hereby and herein conveys its respect and thanks to him for his pivotal role in creating and fostering the conceptual paradigm which is its raison d tre The diversity of interests covered here reflects the variety of Bob s concerns Read on It is an intellectual feast Before you begin permit me to send him a brief personal but public message Bob how right you were and how wrong I was I should explain When Bob arrived in Edinburgh

in 1967 resolution was as yet fairly new having taken several years to become at all widely known Research groups to investigate various aspects of resolution sprang up at several institutions the one organized by Bernard Meltzer at Edinburgh University being among the first For the half dozen years that Bob was a leading member of Bernard's group I was a frequent visitor to it and I saw a lot of him We had many discussions about logic computation and language

Models and Resolution Principles for Logical Meta-programming Languages Institut National de Recherche en Informatique et en Automatique,H. Christiansen,1992 Abstract Meta programming extends logic programming with the possibility of having a program to create or analyze other programs represented as data structures and to give queries dynamically to these programs Thus languages for meta programming represent a logical formalism in which logical theories can refer to provability in arbitrary other perhaps dynamically generated theories The importance is stressed of allowing variables in the program representation which stand for unknown program fragments even in the program currently under execution This can be used for example for hypothetical reasoning where a program generates the hypotheses to be tested or for program generation in the sense that an interpreter fills in the missing program parts It may lead to a more declarative style of e.g program generation the meta program can specify properties of the desired programs at a higher level of abstraction and the detailed synthesis is put in the hands of an implementation The declarative semantics is described in terms of Herbrand models analogous to those normally used for plain logic programs and the well known fixed point results generalize immediately The procedural semantics is given as a resolution method which is shown to be sound and complete Complete resolution for meta programming languages is more complicated than usual due to the possibility of uninstantiated variables which stand for unknown parts of the program currently under execution

Enjoying the Track of Appearance: An Mental Symphony within **Meta Programming In Logic Programming**

In a global eaten by monitors and the ceaseless chatter of instant interaction, the melodic splendor and psychological symphony produced by the published term often fade into the backdrop, eclipsed by the constant noise and interruptions that permeate our lives. But, set within the pages of **Meta Programming In Logic Programming** a charming literary treasure brimming with organic emotions, lies an immersive symphony waiting to be embraced. Constructed by a masterful composer of language, that fascinating masterpiece conducts visitors on a psychological trip, well unraveling the hidden tunes and profound affect resonating within each cautiously crafted phrase. Within the depths of the poignant review, we shall explore the book is key harmonies, analyze its enthralling writing type, and submit ourselves to the profound resonance that echoes in the depths of readers souls.
