Radiometric Tracking Techniques For Deep Space Navigation:

Radiometric Tracking Techniques for Deep-Space Navigation Catherine L. Thornton, James S. Border, 2005-02-18
Radiometric Tracking Techniques for Deep Space Navigation focuses on a broad array of technologies and concepts developed over the last four decades to support radio navigation on interplanetary spacecraft In addition to an overview of Earth based radio navigation techniques the book includes a simplified conceptual presentation of each radiometric measurement type its information content and the expected measurement accuracy The methods described for both acquiring and calibrating radiometric measurements also provide a robust system to support guidance and navigation for future robotic space exploration

Antenna Arraying Techniques in the Deep Space Network David H. Rogstad, Alexander Mileant, Timothy T. Pham, 2003 An introduction to antenna Arraying in the Deep Space network Antenna arraying is the combining of the output from several antennas in order to improve the signal to noise ratio SNR of the received signal Now implemented at the Goldstone Complex and other Deep Space Network DSN overseas facilities antenna arraying provides flexible use of multiple antennas to increase data rates and has enabled NASA s DSN to extend the missions of some spacecraft beyond their planned lifetimes Antenna Arraying Techniques in the Deep Space Network introduces the development and use of antenna arraying as it is implemented in the DSN Drawing on the work of scientists at JPL this timely volume summarizes the development of antenna arraying and its historical background describes key concepts and techniques analyzes and compares several methods of arraying discusses several correlation techniques used for obtaining the combined weights presents the results of several arraying experiments and suggests directions for future work An important contribution to the scientific literature Antenna Arraying Techniques in the Deep Space Network Was commissioned by the JPL Deep Space Communications and Navigation Systems DESCANSO Center of Excellence Highlights many NASA funded technical contributions pertaining to deep space communications systems Is a part of the prestigious JPL Deep Space Communications and Navigation Series The Deep Space Communications and Navigation Series is authored by scientists and engineers with extensive experience in astronautics communications and related fields It lays the foundation for innovation in the areas of deep space navigation and

communications by disseminating state of the art knowledge in key technologies **Low-Noise Systems in the Deep Space Network** Macgregor S. Reid, 2008-09-29 The book explores the low noise microwave systems that form the front end of all DSN ground receiving stations It explains why the front end of each antenna is key to establishing the sensitivity polarization frequency diversity and capabilities of the receiving chain and therefore the entire ground station

Formulation for Observed and Computed Values of Deep Space Network Data Types for Navigation Theodore D. Moyer, 2003-01-31 A valuable reference for students and professionals in the field of deep space navigation Drawing on fundamental principles and practices developed during decades of deep space exploration at the California Institute of Technology s Jet Propulsion Laboratory JPL this book documents the formation of program Regres of JPL s Orbit Determination Program ODP Program Regres calculates the computed values of observed quantities e g Doppler and range observables obtained at the tracking stations of the Deep Space Network and also calculates media corrections for the computed values of the observable and partial derivatives of the computed values of the observables with respect to the solve for parameter vector q The ODP or any other program which uses its formulation can be used to navigate a spacecraft anywhere in the solar system A publication of the JPL Deep Space Communications and Navigation System Center of Excellence DESCANSO Formulation for Observed and Computed Values of Deep Space Network Data Types for Navigation is an invaluable resource for graduate students of celestial mechanics or astrodynamics because it features the expertise of today s top scientists places the entire program Regres formulation in an easy to access resource describes technology which will be used in the next generation of navigation software currently under development The Deep Space Communications and Navigation Series is authored by scientists and engineers with extensive experience in astronautics communications and related fields It lays the foundation for innovation in the areas of deep space navigation and communications by conveying state of the art knowledge in key technologies NASA Technical Memorandum ,1992 **Radio Occultations Using Earth Satellites** William G. Melbourne, 2005 the wave theory foundations of today s radio occultation techniques Forty years ago the premier radio occultation problem was how to profile the atmosphere and radius of Mars using signals sent by the Mariner 4 spacecraft Researchers then could rely on ray theory based techniques for accurate analysis of the thin uniform Martian atmosphere Today s radio occultation challenges mostly involve communications platforms and related data instrument systems and applications in the Earth s own atmosphere To deal with the density and complexity of this multilayered medium an analytical framework that goes beyond ray theory is needed Setting the cutting edge for the field Radio Occultations Using Earth Satellites A Wave Theory Treatment develops a purely wave theoretic approach to occultation analysis This approach yields more nuanced results than either ray or hybrid ray wave methodologies offer and proves suitable for the many variables at work in today s problems This groundbreaking text provides An introduction to the general theory of radio occultations Development of ray theory and scalar diffraction treatments of radio propagation
