Beulens,1994 *Optimization-Based Computer-Aided Modelling and Design* IFIP TC 7.6 Working Group. Working Conference,1992 The working conference dealt with recent developments in the field of modelling and optimization and with knowledge based decision support systems This contributed to the realization of the aims of the working group 7 6 which are to promote theoretical research in the field of optimization including mathematical programming and optimal control to encourage the development of sophisticated knowledge based systems in which refined optimization models and algorithms are used to contribute to the exchange and dissemination of information and collective experience among the interested groups and individuals to support the practical application of such systems in control engineering industry economy etc A selection of papers is included into this proceedings volume since they reflect the current state of research in areas of interest to the field of KB DDS and or they are the value for the dissemination and exchange of information related to research topics of interest and or they describe relevant practical experience related to designing building implementing and using KB DSS Optimization-based Computer-aided Modelling and Design Adriaan Jacobus Beulens,IFIP TC 7.6 Working Group. Working Group Optimization Based Computer Aided Modelling and Design,1996 **New Trends in Mathematical Programming** F. Giannessi,Sándor Komlósi,Tamás Rapcsák,2013-11-11 Though the volume covers 22 papers by 36 authors from 12 countries the history in the background is bound to Hungary where in 1973 Andras Pn kopa started to lay the foundation of a scientific forum which can be a regular meeting spot for experts of the world in the field Since then there has been a constant interest in that forum Headed at present by Tamas Rapcsak the Laboratory of Operations Research and Decisions Systems of the Computer and Automation Institute Hungarian Academy of Sciences followed the tradition in every respect namely conferences were organized almost in every second year and in the same stimulating area in the Matra mountains The basic fields were kept providing opportunities for the leading personalities to give voice to their latest results The floor has been widened recently for the young generation ensuring this way both a real location for the past present and future experts to meet and also the possibility for them to make the multicoloured rainbow of the fields unbroken and continuous The volume is devoted to the memory of Steven Vajda one of the pioneers on mathematical programming born in Hungary In 1992 he took part in the XIth International Conference on Mathematical Programming at Matrafired where with his bright personality he greatly contributed to the good spirituality of the event We thank Jakob Krarup for his reminiscence on the life and scientific activities of late Steven Vajda **Process Systems and Materials for CO2 Capture** Athanasios I. Papadopoulos,Panos

Seferlis,2017-05-01 This comprehensive volume brings together an extensive collection of systematic computer aided tools and methods developed in recent years for CO2 capture applications and presents a structured and organized account of works from internationally acknowledged scientists and engineers through Modeling of materials and processes based on chemical and physical principles Design of materials and processes based on systematic optimization methods Utilization of advanced control and integration methods in process and plant wide operations The tools and methods described are illustrated through case studies on materials such as solvents adsorbents and membranes and on processes such as absorption desorption pressure and vacuum swing adsorption membranes oxycombustion solid looping etc Process Systems and Materials for CO2 Capture Modelling Design Control and Integration should become the essential introductory resource for researchers and industrial practitioners in the field of CO2 capture technology who wish to explore developments in computer aided tools and methods In addition it aims to introduce CO2 capture technologies to process systems engineers working in the development of general computational tools and methods by highlighting opportunities for new developments to address the needs and challenges in CO2 capture technologies

E. Veress,1992 In the chemical process industry the use of computer aided simulation and design has seen rapid expansion and large realistic non linear problems are now being solved routinely via simulation These volumes translate the theories and principles of chemical engineering into efficient computer aided simulation and process design Part A emphasizes techniques to mathematically describe unit operations and arrange the mathematical relations of the models into solution strategies for machine computations Chapter 1 introduces the design aspects of convective heat and mass transfer between phases The following chapter is devoted to models for axial mixing and their applications in reactors and extractors Chapters 3 and 4 review simulations of hydrodynamic unit operations and heat exchangers Chapter 5 is devoted to multistage evaporation Chapters 6 and 7 deal with modelling fluid phase equilibria and the design of separation processes in equilibrium The next two chapters

describe the synthesis of multicomponent distillation systems and the design of heat exchanger networks based on energy integration Chapter 10 is devoted to modelling the batch and continuous drying processes The last chapter reviews the simulation and optimization of various chemical reactors Part B deals with modern methods for solving chemical engineering problems using the systems approach Chapter 1 emphasizes the importance of systems theory in chemical technology Chapter 2 covers modern aspects of model identification and parameter estimation using new methods of model reduction Chapter 3 discusses the structural analysis of chemical engineering networks and applies graph theoretical and matrix representations to the solution of flowsheeting problems The subject of Chapter 4 is the economic analysis estimating profitability and different types of costs Chapter 5 summarizes process control methods This chapter is not only useful to chemical engineers but also to specialists in process control applications Chapter 6 which describes measuring systems bridges the gap between chemical engineers and analytical chemists Emphasis is on the importance of performance characteristics of measuring systems when applied to quality control The books have been written both for engineers in industry who are interested in applying computer techniques to the design and analysis of plants and for advanced students in chemical engineering
