**Atlas of Optical Transforms** G. Harburn, Charles Taylor, T. R. Welberry, 1975      **Atlas of optical transforms** George Harburn, 1988      **Application of Optical Fourier Transforms** Henry Stark, 2012-12-02 Applications of Optical Fourier Transforms is a 12 chapter text that discusses the significant achievements in Fourier optics The opening chapters discuss the Fourier transform property of a lens the theory and applications of complex spatial filters and their application to signal detection character recognition water pollution monitoring and other pattern recognition problems These topics are followed by a computation of the statistical characteristics of the Fourier irradiance patterns and the hybrid systems that combine the best of optics analog electronics and digital computers to solve problems The subsequent chapters examine the pulse Doppler and chirp signals the significance of signal to noise power spectrum in the information content measurement of photographic film and in image quality determinations This text also considers the application of nonlinear systems and their components to Fourier optics The discussions then shift to the application of Fourier methods to the study of spatial information transmission through the human visual system as well as the application of coherent techniques to vision research The concluding chapters deal with the well known pattern recognition problems related to the digital signal processing community These chapters also look into a general theoretical model of light field propagation from input to output This book will be of value to optical scientists and vision researchers      *Laser Experiments For Beginners* Richard N. Zare, 1995-05-04 Laser Experiments for Beginners provides the perfect blueprint for those who wish to work with one of the most remarkable research tools of the twentieth century the laser Ideally suited for high school and university science teachers the experiments in this book require only a low cost low power red laser readily available for under 100 This book presents a series of hands on experiments that can be used for in class demonstrations or student activities Included are quick reference instructions to help the reader identify needed equipment follow recommended safety practices and select the desired experiment s each of which is rated according to conceptual and experimental difficulty Developed by renowned Stanford researcher Richard Zare in collaboration with Bertrand Spencer Dwight Springer and Matthew Jacobson Laser Experiments for Beginners will introduce the student to state of the art laser research techniques It is designed to enhance existing courses in chemistry physics and biology      [Laser Art & Optical Transforms](#) Thomas Kallard, 1979 About the uses of laser in art and optical art      *Optical Transforms* Henry Lipson, 1972      *Optical Transforms in White Light* Shen-ge Wang, 1986      **Optical Pattern Recognition** Francis T.
