Perspective On Learning:

Perspectives on Learning Denis Charles Phillips,Jonas F. Soltis,2004 Rather than simply outlining the classical and modern theories of learning this widely adopted text brings the material to life through case studies that engage students in debates about what really happens in classrooms Students are encouraged to test the strengths and weaknesses of each theory so that ultimately they will learn to formulate their own philosophies of teaching and learning Perspectives on Learning is one of the five books in the highly regarded Teachers College Press Thinking About Eeucation Series now in its Fourth Edition All of the books in this series are designed to help pre and in service teachers bridge the gap between theory and practice Book jacket   Learning Theories Dale H. Schunk,2011-01-01 The main objectives of this text are to inform students of learning theoretical principles concepts and research findings especially as they relate to education and to provide applications of principles and concepts in settings where teaching and learning occur   **Learning in the learner's perspective** Roger Säljö,1979   **Perspectives on Thinking, Learning, and Cognitive Styles** Robert J. Sternberg,Li-fang Zhang,2014-04-08 This volume presents the most comprehensive balanced and up to date coverage of theory and research on cognitive thinking and learning styles in a way that represents diverse theoretical perspectives includes solid empirical evidence testing the validity of these perspectives and shows the application of these perspectives to school situations as well as situations involving other kinds of organizations International representation is emphasized with chapters from almost every major leader in the field of styles Each chapter author has contributed serious theory and or published empirical data work that is primarily commercial or that implements the theories of others The book s central premise is that cognitive learning and thinking styles are not abilities but rather preferences in the use of abilities Traditionally many psychologists and educators have believed that people s successes and failures are attributable mainly to individual differences in abilities However for the past few decades research on the roles of thinking learning and cognitive styles in performance within both academic and nonacademic settings has indicated that they account for individual differences in performance that go well beyond abilities New theories better differentiate styles from abilities and make more contact with other psychological literatures recent research in many cases is more careful and conclusive than are some of the older studies Cognitive learning and thinking styles are of interest to educators because they predict academic performance in ways that go beyond abilities and because taking styles into account can help teachers to improve both instruction and assessment and to show sensitivity to cultural and individual diversity among learners They are also of interest in business where instruments to assess styles are valuable in selecting and placing personnel The state of the art research and theory in this volume will be of particular interest to scholars and graduate students in cognitive and educational psychology managers and others concerned with intellectual styles as applied in educational industrial and corporate settings   **International Handbook of Research in Professional and Practice-based Learning** Stephen Billett,Christian Harteis,Hans Gruber,2014-07-15 The

Spector,T.M. Anderson,2005-12-17 One outcome of recent progress in educational technology is strong interest in providing effective support for learning in complex and ill structured domains We know how to use technology to

promote understanding in simpler domains e g orientation information procedures with minimal branching etc but we are less sure how to use technology to support understanding in more complex domains e g managing limited resources understanding environmental impacts etc Such domains are increasingly significant for society Technology e g collaborative tele learning digital repositories interactive simulations etc can provide conceptually and functionally rich domains for learning However this introduces the problem of determining what works in which circumstances and why Research and development on these matters is reflected in this collection of papers This research suggests a need to rethink foundational issues in educational philosophy and learning technology One major theme connecting these papers is the need to address learning in the large from a more holistic perspective A second theme concerns the need to take learners where and as they are integrating technology into effective learning places Significant and systematic progress in learning support for complex domains demands further attention to these important issues
