*Computer Architecture* Michael J. Flynn, 1995 Computer Architecture Software Engineering **Pipelined and Parallel Computer Architectures** Sajjan G. Shiva, 1996 This is a comprehensive introduction to pipelined and parallel computer architecture aimed at students taking a further education course in computer architecture Each chapter provides the most generic hardware aspects followed by supporting details on corresponding programming languages data structures and operating systems but also provides details of representative commercially available systems PARALLEL COMPUTERS ARCHITECTURE AND PROGRAMMING RAJARAMAN, V., MURTHY, RAM C. SIVA, 2016-03-11 Today all computers from tablet desktop computers to super computers work in parallel A basic knowledge of the architecture of parallel computers and how to program them is thus essential for students of computer science and IT professionals In its second edition the book retains the lucidity of the first edition and has added new material to reflect the advances in parallel computers It is designed as text for the final year undergraduate students of computer science and engineering and information technology It describes the principles of designing parallel computers and how to program them This second edition while retaining the general structure of the earlier book has added two new chapters Core Level Parallel Processing and Grid and Cloud Computing based on the emergence of parallel computers on a single silicon chip popularly known as multicore processors and the rapid developments in Cloud Computing All chapters have been revised and some chapters are re written to reflect the emergence of multicore processors and the use of MapReduce in processing vast amounts of data The new edition begins with an introduction to how to solve problems in parallel and describes how parallelism is used in improving the performance of computers The topics discussed include instruction level parallel processing architecture of parallel computers multicore processors grid and cloud computing parallel algorithms parallel programming compiler transformations operating systems for parallel computers and performance evaluation of parallel computers **Advanced Computer Architecture** Rajiv Chopra, 2008 This book covers the syllabus of GGSIPU DU UPTU PTU MDU Pune University and many other universities It is useful for B Tech CSE IT M Tech CSE MCA SE students Many solved problems have been added to make this book more fresh It has been divided in three parts Parallel Algorithms Parallel Programming and Super Computers The Architecture of Pipelined Computers Peter M. Kogge, 1981-01-01 This text is designed to document and unify much of the theory techniques and understanding about pipelining presenting the material so that the reader can recognize and use the techniques in future design It is more of an engineering than a theoretical text discussions range from logic design considerations through the construction cascading and control of pipelined structures to the architecture of complete systems and the development of programming techniques to efficiently use such machines Examples from real are used whenever possible to amplify the development and presentation of concepts **Design Methodologies for VLSI and Computer Architecture** Doug A. Edwards, 1989 **VLSI Algorithms and Architectures** N. Ranganathan, 1993 **1985**

**IEEE Computer Society Workshop on Computer Architecture for Pattern Analysis and Image Database Management, Miami Beach, Florida, November 18-20, 1985** IEEE Computer Society, 1985 *Schaum's Outline of Computer Architecture* Nick Carter, 2001-12-21 A problem solution manual integrating general principles and laboratory exercises that provides students with the hands on experience needed to master the basics of modern computer system design Features more than 200 detailed problems with step by step solutions many detailed graphics and charts chapter summaries with additional rapid review questions and expert sidebar tips Describes analytical methods for quantifying real world design choices regarding instruction sets pipelining cache memory I O and other critical hardware and software elements involved in building computers An ideal educational resource for the more than 70 000 undergraduate and graduate students who each year enroll in computer architecture and related courses Parallel Architectures Naphtali Rishé, Sham Navathe, Doron Tal, 1991 Papers from the conference PARBASE 90 held in Miami Beach Florida March 1990 include discussions of a theory of conjunction and concurrency space efficient list merging on a multiprocessor ring scalable architectures for VLSI based associative memories and the extended G network No subject in **CFD Algorithms and Applications for Parallel Processors** Oktay Baysal, Vijay Saxena, 1993 1983 IEEE Computer Society Workshop on Computer Architecture for Pattern Analysis and Image Database Management, 1983 *Computer and Digital System Architecture* William D. Murray, 1990 Computer Systems Organization Processor Architectures *Advanced Computer Architecture* D. P. Agrawal, 1986 Computer architecture is expected to cover the gap between digital hardware and computer software This tutorial will emphasize the importance of such a close interaction and the impact of parallel distributed processing and VLSI technology will be clearly shown Other important issues include examination of tradeoffs in the design of supercomputers and potential advantages of unique architectural concepts Strategies for evaluating system performance will also be covered This tutorial is meant for system designers application engineers scientists researchers and students Some background in computer organization architecture will be assumed **Parallel and Distributed Computing Handbook** Albert Y. Zomaya, 1996 With over 1 000 pages and a wealth of illustrations and data tables this handbook offers readers the first information source with the scope to encompass the parallel and distributed computing revolution Written by an international team of experts the book summarizes the current state of the art interprets the most promising trends and spotlights commercial applications **Fast Algorithms and Their Implementation on Specialized Parallel Computers** Jozef Mikloško, 1989 Recognizing the need for a comprehensive overview of new results this book looks at the problems of creating fast numerical and nonnumerical algorithms It also contains analyses of their properties and possibilities of their efficient implementation on specialized parallel computers Instead of treating these problems separately the book deals with them in their complexity taking into account their mutual relationships Attention is paid to the following topics methods of creating fast parallel algorithms parallel algorithms for associative computers systolic algorithms and their

implementation on specialized processors algorithms for pipeline and matrix processors and for multiprocessors solution of a system of linear equations on specialized computers lower time bounds for SIMD type algorithms

**Modeling for Parallel-pipeline Central Processors** Dorothy Ellen Lang,1981

**High-performance Computer Architecture** Harold S. Stone,1993 This update of the popular book on computer architecture presents design ideas embodied in many high performance machines and stresses techniques for evaluating them Stone develops a proper understanding of the design process by treating the various trade offs that exist in designing choices and shows how good designs make efficient use of technology Features Teaches techniques for the design and analysis of high performance machines Develops students intuition for design by treating various tradeoffs that exist in design choices Discusses many important topics RISC architectures interconnection meshes Cache coherent and multiprocessors and Cache Memory Includes enhanced descriptions of RISC Processors Expands material on Cache Memory Analysis Current technology in RISC with a focused look on super scalar Additional memory models and techniques for doing Cache design New proposals for coherent memory systems in System C parallel processors Both design and thought problems and problems with limiting parameters are provided 0201526883B04062001

**Computational Collective Intelligence** Tadeusz M. Szuba,2001-03-07 Introducing a groundbreaking approach to understanding measuring and applying Collective Intelligence Does Collective Intelligence CI exist and if so how can it be characterized quantified and harnessed Questions such as these continue to be hotly debated within both the scientific and philosophical communities Yet few researchers working in the fields of artificial intelligence or distributed computing doubt CI s enormous potential value to the future of computing Unfortunately for lack of a rigorous formal theory of Collective Intelligence most attempts to analyze CI systems have been disappointing at best In Computational Collective Intelligence Professor Tadeusz Szuba does much to rectify that situation by developing for the first time both a formal definition of CI and practical guidelines for its assessment and applications Working from the ground up Dr Szuba begins with a stimulating and insightful discussion of the types of intelligence including individual artificial and collective into which he brings ideas from AI information theory and distributed computing as well as psychology sociology animal behavior cognitive science and other relevant disciplines He tackles the problem of computational models for simulating and measuring CI He explores all theoretically feasible models of CI computations and presents a groundbreaking nondeterministic approach using the Random PROLOG Processor RPP as a CI modeling and evaluation tool He then introduces the Collective Intelligence Quotient IQS and develops clear cut guidelines for measuring it In the final chapters he lays the foundation for a dynamic new discipline Collective Intelligence Engineering CIE and considers its potential applications as an organizational restructuring tool
